Overview

- Alcohol-Impaired Driving Data
- Research and Recommendations
- North Carolina’s Ignition Interlock Laws
Alcohol-Impaired Driving Data
Alcohol-Impaired Driving Nationally

- Average alcohol-impaired driver has driven under the influence of alcohol over 80 times before their first arrest

- In 2016, 1,233 children were killed in crashes
  - 214 (17%) were killed in alcohol-impaired crashes
  - 115 (54%) were passengers of vehicles with alcohol-impaired drivers

Binge Drinking and Drinking and Driving*, NC Residents, 2012-2017

*Binge drinking: adult men having five or more drinks on one occasion; adult women having four or more drinks on one occasion. Drinking and Driving: Percent who reported that at least once during the past 30 days they drove when they’ve had perhaps too much to drink.

Analysis by Injury Epidemiology and Surveillance Unit
Alcohol Consumption and Drinking and Driving*,
NC High School Students, 2017

*At least one alcoholic drink in past 30 days: Percent of students who currently drank alcohol (at least one drink of alcohol on at least 1 day during the 30 days before the survey). Drinking and Driving: Percent of students who drove when drinking alcohol (one or more times during the 30 days before the survey, among students who had driven a car or other vehicle during the 30 days before the survey)

Alcohol-Related Crashes, Injuries, and Fatalities
Rates per 100,000 NC Residents

In 2016, alcohol-related crashes accounted for 4% of all crashes in NC, but alcohol-related crash fatalities made up 28% of all crash fatalities.

Research and Recommendations
Alcohol Ignition Interlocks

• Alcohol ignition interlocks are breath test devices installed in a motor vehicle to prevent operation of the vehicle by a driver who has a blood alcohol concentration (BAC) over a pre-set low limit (usually 0.02-0.04 BAC)

• All 50 states have some type of ignition interlock programs and laws, yet only about one-fifth of those arrested for DWI have interlocks installed

Community Guide’s Systematic Review

• While installed, interlocks reduced re-arrest rates by 67%

• After removing interlocks, re-arrest rates reverted to rates similar to those of people convicted of DUI who had not used interlocks

• Drivers with interlocks had fewer alcohol-related crashes than those who only had licenses suspended for a DUI conviction

• Overall crash rates for drivers with interlocks installed were similar to the crash rates for the general driving population

The Task Force on Community Preventive Services’ Recommendation:

“The Community Preventive Services Task Force recommends the use of ignition interlocks for people convicted of alcohol-impaired driving on the basis of strong evidence of their effectiveness in reducing re-arrest rates while the interlocks are installed.”
Impact of State Ignition Interlock Laws on Alcohol-Involved Crash Deaths in the United States

Elinore J. Kaufman, MD, and Douglas J. Wiebe, PhD

**Objectives.** To investigate the impact on alcohol-involved crash deaths of universal ignition interlock requirements, which aim to prevent people convicted of driving under the influence of alcohol from driving while intoxicated.

**Methods.** We used data from the National Highway Traffic Safety Administration for 1999 to 2013. From 2004 to 2013, 18 states made interlocks mandatory for all drunk-driving convictions. We compared alcohol-involved crash deaths between 18 states with and 32 states without universal interlock requirements, accounting for state and year effects, and for clustering within states.

Mandated universal interlocks were associated with **15% fewer alcohol-involved crash deaths**.
Drivers who received treatment experienced a 32% decrease in re-arrest compared to those who did not attend rehab.
Benefits of treating ignition interlock usage:

- Lowered recidivism by 32%
- Prevented
  - 45 arrests
  - 14 motor vehicle crashes
  - ~ 10 injuries

**Economic benefit**

Treated 640 DUI offenders at a cost of $192,000
Prevented $905,000 in crash costs
Net benefit = $713,000

The Centers for Disease Control and Prevention’s Recommendation:

“[Ignition interlocks] are highly effective at preventing repeat offenses while installed. Mandating interlocks for all offenders, including first-time offenders, will have the greatest impact.”
NC’s Ignition Interlock Laws
Current Laws in North Carolina

• Mandatory interlocks if BAC was >0.15 or if the person is a second or subsequent offender

• Tampering or attempting to circumvent the interlock is a Class 1 misdemeanor

• After restoration of drivers license, interlock usage is as follows:
  • 1 year if license was revoked for 1 year
  • 3 years if license was revoked for 4 years
  • 7 years if license was permanently revoked but can be restored

Interlocks in Use, 2006-2011

Interlocks in use per 100 DWI arrests, 2011

Ignition interlock law

A law that mandates the use of ignition interlocks for drivers convicted of alcohol-impaired driving. An ignition interlock is a device that analyzes a driver’s breath and prevents the vehicle from starting if alcohol is detected.

As of July 1, 2015, North Carolina required ignition interlocks for repeat offenders convicted of alcohol-impaired driving and first-time offenders with a particularly high blood alcohol concentration (30).

Task Force on Community Preventive Services recommendation: Use of ignition interlocks is recommended for all people convicted of alcohol-impaired driving on the basis of strong evidence of interlocks’ effectiveness in reducing re-arrest rates while the interlocks are installed (20).

<th>Rating</th>
<th>State ignition interlock law</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Ignition interlocks required for all offenders convicted of alcohol-impaired driving (i.e., driving with a blood alcohol concentration [BAC] (\geq 0.08) g/dL), which includes both first-time and repeat offenders</td>
</tr>
<tr>
<td>Yellow</td>
<td>Ignition interlocks required for repeat offenders convicted of alcohol-impaired driving or first-time offenders with a particularly high BAC (e.g., BAC (\geq 0.15) g/dL)</td>
</tr>
<tr>
<td>Red</td>
<td>Ignition interlocks not required for any offenders convicted of alcohol-impaired driving</td>
</tr>
</tbody>
</table>

How This Rating Was Determined

The rating reflects the extent to which the state required use of ignition interlocks for drivers convicted of alcohol-impaired driving. Ratings are based on data collected from the Insurance Institute for Highway Safety (IIHS) on July 1, 2015, and therefore reflect IIHS’s interpretation of each state’s policy at that time (30). The “as of” date referenced—July 1, 2015—is the date CDC assessed the policy. The date does not reflect when the law was enacted or became effective.
