THE NORTH CAROLINA COMMON FOLLOW-UP SYSTEM (CFS)

2021 EVALUATION REPORT

APRIL 2021

Background

The purpose of the Common Follow-up System (CFS) is to provide information on the educational and employment outcomes of publicly supported educational, employment, and training programs for use in policy making, program evaluation, resource allocation, and career planning.

[Chapter 96 Article 4 of the North Carolina General Statute](#) requires the North Carolina Department of ¹Commerce's Labor and Economic Analysis Division (LEAD) to develop, implement, and maintain a common follow-up information management system for tracking performance measures related to current and former participants in State job training, education, and placement programs. LEAD is also charged with evaluating the effectiveness of programs and determining if specific program goals and objectives are attained, determining placement rates for each program, and with making recommendations regarding programs evaluated. Information about CFS operational activities is available on the [CFS website](#)².

Evaluation Highlights

The Common Follow-up System provides the mechanism for carrying out longitudinal analyses that can be utilized to develop measures of program performance and effectiveness. As part of its responsibility for evaluating programs contained in the CFS, LEAD has performed a series of analyses to measure the educational and employment outcomes of individuals participating in several North Carolina public education, employment, and training programs. The goal is to develop key evaluative performance indicators related to employment and wage outcomes, as well as to further participation in education and employment programs. It is intended that these measures can be utilized in concert with other programmatic information to aid in the assessment of program effectiveness.

Analyses focus on addressing four key questions:

- What percentage of former participants and completers of publicly supported education, employment, and training programs are employed in North Carolina during the years following their participation in these programs?
- What are the wage outcomes of these individuals?
- How do employment and wage outcomes vary by industry?

¹ https://www.ncleg.net/EnactedLegislation/Statutes/HTML/ByArticle/Chapter_96/Article_4.html

² <https://tools.nccareers.org/cfs/>

- To what extent do these individuals enroll in subsequent education, employment, or training programs?

The outcome measures are calculated for five year-based cohort groups for each program and include outcome measures for up to five years post-exit/graduation. Relevant employment and wage statistics include the number and percent employed in North Carolina, median and average wages for each program, summary employment and wage statistics by industry. Post-enrollment measures include participation in education, employment, and training programs.

» Methodology

Data from the CFS is utilized to perform a series of longitudinal analyses that focus on assessing the educational and employment outcomes of individuals participating in publicly supported education, employment, or training-related programs. Each year, the participating agencies supply data files for the program year. For the 2018-2019 year, the participating agencies submitted data files covering the time period July 1, 2018 through June 30, 2019. These formatted files are created from existing information systems at each of the entities and contain demographic and program-related information for individuals participating in programs and services operated by each of the contributing entities. In addition to the agency data, the CFS contains information provided by the Division of Employment Security including quarterly unemployment insurance (UI) wage files and unemployment insurance claims-related information.

Analyses are accomplished by matching individual program participant data across programs and agencies to information in the unemployment insurance wage file. Specifically, CFS data is used to compile outcome information for five program-year cohorts. Each participating agency operates a diverse set of programs and services. These programs vary in terms of participant characteristics, operational guidelines and procedures, and program goals. As a result, program definitions - including participation, exit and completion - can differ across programs. These operational differences provide some inherent challenges when assessing outcomes across programs. This report includes outcome information for exit and completion cohorts, utilizing definitions specific to each of the assessed programs. Therefore, the specific definitions of participant, exiter, and/or completer are provided in each of the corresponding program sections of this report.

Employment and wage outcomes are derived for each program exiter/completer cohort. Information from the quarterly UI wage data is utilized to develop employment and wage statistics. Wage data for each exiter is summed across the four quarters immediately following the exit/completion quarter to produce a one-year post-exit/completion wage. Wage information from the subsequent four quarters are summed to produce a two-year post-exit/completion wage. Successive four quarters are summed to produce subsequent post exit/completion annual wage statistics. If an individual has wages in any of the four quarters of the corresponding year, they are counted as employed. Employment and wage outcomes are compiled separately for each cohort.

Further analyses of industry employment and wage patterns are also undertaken. Each employer covered by the state's unemployment insurance laws is assigned a North American Industry Classification (NAICS) code. Codes are assigned to each employer based on the primary industry function of the employing unit. The NAICS coding system provides a hierarchical coding scheme that allows for the grouping of codes into broader industry sectors. Post-employment statistics are calculated for each program exit/completion cohort by 13

different industry sectors. Individuals can be employed in more than one industry within a year or even within a quarter. In those instances where an individual is found to be employed in more than one industry sector, they are counted separately in each sector but only once in the total employment statistics.

Analysis of post participation in additional education, employment, and training is completed by cross-matching the information across entities and programs. Three measures are developed; the first measure includes the number and percentage of individuals who participated in public higher education. This is compiled by cross-matching the exit/completion cohort to records from the North Carolina Community College System and from the University of North Carolina System. If individuals are found to be participating in any program in either System, they are counted as enrolled in public higher education. The second post-participation measure is compiled by cross-matching each exit/completion cohort to data from the rest of the participating entities. If an individual is found to be enrolled or receiving services from them, they are counted as being enrolled in further public education, employment, or training. The third measure integrates the second measure along with the employment-related information. The result is a measure of whether individuals are either employed or enrolled in further public education, employment, or training programs.

» Limitations

While the CFS provides a rich source of information regarding the participation of individuals in various education, employment, and training programs, the data is not without limitations. Information supplied by participating agencies comes from existing systems within each agency. Any data limitations that exist in those source systems, data repositories, and corresponding data elements are necessarily transferred along with the data to the CFS. Also, CFS does not include information from North Carolina's private educational institutions, out-of-state colleges and universities, or non-participating employment and training-related service providers.

The unemployment insurance wage data has its own strengths and limitations. Wage files only include information on individuals working in jobs covered by North Carolina's unemployment insurance laws. Employment-related information includes: total quarterly wages paid to an individual, size of the employing firm, and the NAICS code of the firm. Wage information is not available for workers outside of North Carolina, workers employed in North Carolina but not covered by North Carolina's unemployment insurance laws (e.g., the self-employed, church and religious organization employees, summer camp employees, federal government employees, enrolled in the military, and other non-covered workers. Employment-related data that cannot be determined includes: the entry-on-duty date of employment, the employment type (i.e., permanent, temporary, part- or full-time), length of time worked during the quarter, the number of hours worked, and the person's occupation.

Additionally, the CFS relies on the use of Social Security Numbers (SSNs) to match program participation with employment-related information. If SSNs are not available, the matching of data across agency and employment sources is problematic. LEAD is continuing to work with GDAC to enhance system capability to match data utilizing additional identity resolution methodologies, which will assist in future analytical efforts.

The 2021 CFS Evaluation Report provided information on the state's educational and workforce development training activities in the midst of the COVID-19 pandemic. While the pandemic had a significant impact on many sectors of the economy, this report was not able to measure the effect of the pandemic on the training outcomes due to report time period ending June 30, 2020, only a few months into the pandemic.

» Programs Assessed

The Common Follow-up System contains information on a diverse set of education, employment, and training programs and services. Analyses included in this report focus on 17 programs across four agencies. These include the following:

THE DEPARTMENT OF COMMERCE

Division of Workforce Solutions:

1. Workforce Investment Act (WIA) Title I Adult Program
2. Workforce Investment Act (WIA) Title I Dislocated Worker Program
3. Workforce Investment Act (WIA) Title I Youth Program
4. Wagner-Peyser Program

THE DEPARTMENT OF HEALTH AND HUMAN SERVICES

5. Division of Social Services - Work First - Temporary Assistance for Needy Families (TANF)
6. Division of Vocational Rehabilitation Services
7. Division of Services for the Blind

THE NORTH CAROLINA COMMUNITY COLLEGE SYSTEM

8. Career and Technical Education Programs
9. Workforce Continuing Education Training
10. Human Resources Development Programs
11. Basic Skills Programs
12. Customized Training Program
13. Apprenticeship Program

UNIVERSITY OF NORTH CAROLINA SYSTEM

14. Bachelors Programs
15. Masters Programs
16. Doctoral (Research) Programs
17. Doctoral (Professional Practice) Programs

The Department of Commerce

Division of Workforce Solutions

» Overview of WIA and WIOA Title I Programs

The Workforce Investment Act (WIA) of 1998 authorized the nation's federally funded workforce development system and provided funding for services to employers and job seekers. WIA Title I programs consisted of three distinct funding streams: Adult, Dislocated Workers, and Youth. In July of 2014, the Workforce Innovation and Opportunity Act (WIOA) was signed into law, and superseded WIA. WIOA took effect on July 1, 2015 and is designed to help job seekers access the employment, education, training, and support services they need to succeed in the labor market, and to match employers with the skilled workers they need to compete in the global economy. Part of the goal of WIOA is to provide opportunity for reforms of local service centers, known as the American Job Center system, and to ensure that the system is responding to the needs of employers and preparing workers for jobs that are available now and in the future.³

WIA Title I Adult⁴ and Dislocated Worker⁵ programs were designed to increase employment and employment retention, increase earnings of dislocated workers, and enhance customer satisfaction for both participants and employers. Both WIOA and WIA Adult and Dislocated Worker programs provide a variety of education, employment-related, and training services to eligible customers. Changes implemented with WIOA include the provision of both career and training services, replacing the WIA service levels of core, intensive, and training services. The Adult and Dislocated Worker programs provide comprehensive assessments, career and labor market information, job search and placement assistance, counseling, and occupational and basic skills training. Additional supportive services, including assistance with transportation, childcare, dependent care, housing, and other needs-related payments, are available to help facilitate program participation. Funds also help to support Rapid Response services that assist employers and workers in the event of company layoffs and closings.

The WIOA Title I Youth program is designed to serve low-income youth who face barriers to continued education and employment. Specific services that are made available include case management, tutoring, alternative secondary school offerings, the provision of work experience, occupational skills training, leadership development opportunities, mentoring, guidance, counseling, and support. Eligibility is defined separately for out-of-school youth aged 16-24 and in-school youth aged 14-21. Funds for youth services are allocated to states and local areas based on a formula. At least 75% of state and local youth funding must be allocated for out-of-school youth and a minimum of 20% of local youth formula funds must be used for work experiences, such as summer and year-round employment, pre-apprenticeship, on-the-job training, or internships and job shadowing.⁶

» WIA/WIOA Title I Adult Program Outcomes

Analyses of program participant counts revealed that the number of WIA and WIOA Adult program participants peaked in the 2015-2016 program year and has since dropped significantly (Figure 1). Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

WIOA was implemented (replacing WIA) in July 2015, therefore post-exit wage and employment statistics represent participants who received WIA services in 2014-2015, and WIOA services in the program years from 2015-2016 through 2018-2019. Employment and wage outcomes were derived for each cohort of WIA/WIOA program exiters. These included analyses of post-exit employment rates (Figure 2) and wages (Figure 3) for up to five years after exit (also see Table 1). These measures include only those individuals who were employed in North Carolina in jobs covered by the state's unemployment insurance laws.

Figure 1. WIA/WIOA Title I Adult Program Participants and Exiters by Program Year

One-year post-exit employment rates have increased steadily across the five program years (Figure 2). While one-year post-exit enrollment in North Carolina public higher education remained fairly steady for the first 3 years of the study period (2014-2015 to 2016-2017 program years) then experienced a significant increase for the final two years (2017-2018 to 2018-2019 program years (Table 1), which probably was a result of a smaller cohort size in these years.

As shown in Figure 2, longer term post-exit employment measures show a slight decline in the percentage of WIA/WIOA Title I Adult exiters employed in North Carolina. This is common across most workforce training and education programs and may be due in part to former participants leaving the state or entering employment not covered by unemployment insurance.

Figure 2. Percentage of WIA/WIOA Title I Adult Exiters Employed in North Carolina After Exit, by Year of Exit

One-year post-exit median annual wages ranged from \$15,078 for the 2014-2015 program year exiters to a high of \$20,487 for the 2018-2019 program year exiters (Figure 3 and Table 1).⁷ For all cohorts, the median wages of former participants rose consistently in each subsequent year following program exit. For example, the median wages of participants who exited in program year 2014-2015 increased from \$15,078 one year after exit to \$24,180 five years after exit.

Figure 3. Median Wage of WIA/WIOA Title I Adult Program Exiters in North Carolina, by Year of Exit

Employment outcomes by industry one year after exit for the 2018-2019 cohort show 39% of WIA/WIOA Adult program exiters were employed in the Health Care and Social Assistance industry, earning a median

⁷ The 2019 CFS Evaluation Report indicated a one-year post-exit median wage for 2014-2015 WIA Adult exiters of \$15,069. The wage files are continually updated, creating minor calculation changes over time.

annual wage of \$18,410. Other top employing industries for the 2018-2019 exiting cohort include Professional and Business Services (28%); Retail Trade (15%); Wholesale Trade, Transport, and Utilities (15%); and Leisure and Hospitality (14%). Of these industries, Health Care and Social Assistance had the highest median annual wage (\$18,410), followed by Wholesale Trade, Transport, and Utilities (\$12,106) (Figure 4 and Table 1).

Figure 4. 2018-2019 WIA/WIOA Title I Adult Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

Overall short-term wages for exiters have risen over time and employing industries have shifted. The median wage of the 2014-2015 WIA Adult exiters was \$15,078 during the first year after exit while the comparable wage for 2018-2019 exiters was \$20,487. By contrast, the 2019 median annual wage in North Carolina for all wage earners covered by unemployment insurance was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.⁸ The two most recent program years (2017-2018 and 2018-2019) show an increase in the share of WIOA exiters who later found employment in the Health Care and Social Assistance industry. For each of the 3 prior program years (2014-2015, 2015-2016, and 2016-2017) approximately 15% of exiters were employed in this industry one year after completion. While for the 2017-2018 and 2018-2019 program years, approximately 39% of WIOA exiters were employed in Health Care and Social Assistance one year after program completion. This increase in the share of Health Care and Social Assistance employment was accompanied by a decrease in the share of Manufacturing employment from 20% one-year post-exit for the 2016-2017 program year to 10.8% one-year post-exit for the 2018-2019 cohort.

⁸ Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey). Source of poverty guidelines: U.S. Department of Health & Human Services, <https://aspe.hhs.gov/2019-poverty-guidelines>

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» WIA/WIOA Title I Dislocated Worker Program Outcomes

As shown in Figure 5, the number of participants in the WIA/WIOA Dislocated Worker program between the 2014-2015 and 2018-2019 program years has dropped. In particular, the 2014-2015 program year had much higher participation than subsequent years. Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

Figure 5. WIA/WIOA Title I Dislocated Worker Program Participants and Exiters by Program Year

WIOA was implemented (replacing WIA) in July 2015, therefore post-exit wage and employment statistics represent participants who received WIA services in 2014-2015, and WIOA services in the program years from 2015-2016 through 2018-2019. Employment and wage outcomes were derived for each WIA/WIOA Title I Dislocated Worker exit cohort between 2014-2015 and 2018-2019. These included measures of post-exit employment rates (Figure 6) and wages (Figure 7) for up to five years after exit (also see Table 2). These measures include only those individuals who were employed in North Carolina in jobs covered by the state's unemployment insurance laws.

One-year post-exit employment rates were relatively stable across the five cohorts, ranging from a high of 82% for 2015-2016 exiters to a low of 76% for 2016-2017 and 2018-2019 exiters (Figure 6 and Table 2). One-year post-exit enrollment in NC public higher education ranged from 13% for the 2014-2015 cohort to 17% for the 2015-2016 and 2017-2018 cohorts (Table 2). Longer term post-exit employment measures indicate that five years after exit, 69% of the 2014-2015 exiting cohort were employed in North Carolina, earning a median salary of \$28,815. Post-exit employment rates were relatively steady across cohorts for a given post-exit year.

Figure 6. Percentage of WIA/WIOA Title I Dislocated Worker Program Exiters Employed in North Carolina After Completion, by Year of Exit

One-year post-exit median wages rose from \$18,039 in the 2014-2015 cohort to \$25,957 for the 2016-2017 cohort then slightly declined to \$24,367 for the 2018-2019 cohort (Figure 7 and Table 2).

However, median post-exit wages increased over time within all cohorts. The 2014-2015 exiters experienced a growth in median wages from \$18,039 one year after exit to \$25,217 three years after exit and \$28,815 at the five-year mark, while the 2016-2017 exiters saw median wages grow from \$25,957 one-year post-exit to \$32,073 three years post-exit.

Figure 7. Median Wage of WIA/WIOA Title I Dislocated Worker Program Exiters in North Carolina, by Year of Exit

As shown in Figure 8 and Table 2, one-year employment outcomes by industry for the 2018-2019 exiting cohort indicate that 35% of WIOA Dislocated Worker program participants were subsequently employed in the Professional and Business Services industry, earning a median annual wage of \$13,108. Other industries frequently employing this 2018-2019 cohort one year after exiting the program include Health Care and Social Assistance (23%); Wholesale Trade, Transport, and Utilities (14%); Retail Trade (14%); and Manufacturing (13%). Of these top employing industries, Manufacturing was associated with the highest median annual wage (\$22,922).

Figure 8. 2018-2019 WIA/WIOA Title I Dislocated Worker Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

Overall, there has been a slight drop in short-term employment rates for WIA/WIOA Dislocated Worker program exiters. This is indicated by the one-year post-employment trends. When exiting cohorts are followed over time, the employment rate tends to decline somewhat, while the median wages rise. The median wage of WIA/WIOA Dislocated Worker participants who exited in the 2014-2015 program year was \$28,815 five years after exit. By contrast, the 2019 median annual wage in North Carolina for all wage earners covered by unemployment insurance was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.⁹

⁹ Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey). Source of poverty guidelines: U.S. Department of Health & Human Services, <https://aspe.hhs.gov/2019-poverty-guidelines>

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» WIA/WIOA Title I Youth Program Outcomes

Analyses show a significant increase in the number of WIA Youth program participants in 2015-2016 program year, followed by small but steady decrease in subsequent years (Figure 9). Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

Figure 9. WIA/WIOA Title I Youth Program Participants and Exiters by Program Year

WIOA was implemented (replacing WIA) in July 2015, therefore post-exit wage and employment statistics represent participants who received WIA services in 2014-2015, and WIOA services in the program years from 2015-2016 through 2018-2019. Employment and wage outcomes were derived for each WIA/WIOA Title I Youth program exit cohort and included post-exit employment rates (Figure 10) and wages (Figure 11) for up to five years after exit (Table 3).

One-year post-participation employment rates reflect a steady increase across the five exiting cohorts, reflecting a higher percentage of exiters employed for each subsequent cohort. Employment rates across the five program years rose from 76% for the 2014-2015 program year exiters to 81% for the 2018-2019 program year exiters (Figure 10 and Table 3). At the same time, rates of one-year post-exit enrollment in NC public higher education declined across all cohorts from 33% to 25% (Table 3), but are still among the highest of any workforce development program.

One-year post-exit median wages have increased overall across cohorts, from \$5,861 for the 2014-2015 exiters, to \$9,092 for the 2018-2019 completers (Figure 11). It is important to note that WIA/WIOA Title I Youth participants range in age from 14 to 21 and are more likely to be in high school or higher education, and less likely to be working full time than older workers.

Longer term post-exit employment and wage measures for the WIA/WIOA Title I Youth program indicate that employment rates were relatively stable over time within each cohort, while wages rose over time within each

cohort. For example, median wages for the 2014-2015 cohort started at \$5,861 one-year post exit and increased to \$12,335 at five years post exit.

Figure 10. Percentage of WIA/WIOA Title I Youth Program Exiters Employed in North Carolina After Exit, by Year of Exit

Figure 11. Median Wage of WIA/WIOA Title I Youth Program Exiters in North Carolina, by Year of Exit

As shown in Figure 12 and Table 3, one-year employment outcomes by industry for the 2018-2019 cohort exiters indicate that 38% of the Youth program exiters found employment in the Leisure and Hospitality industry, earning a median wage of \$2,815. Other top employing industries include Professional and Business Services (32%), Retail Trade (29%), and Health Care and Social Assistance (21%).

Figure 12. 2018-2019 WIA/WIOA Title I Youth Program Participants and Exiters, Showing Outcomes One Through Five Years After Exit, Overall and By Industry

Overall, the results show that there have been increasing short-term employment rates and short-term median wages for the WIA/WIOA Youth program exiters. This is indicated by the one-year post-employment and wage trends. When exiting cohorts are followed over time, the employment rate tends to be stable. In addition, while the median wages of WIA/WIOA Youth exiters are low, they continue to rise over time. It is important to keep in mind that the WIA/WIOA Youth program serves individuals aged 14 to 21 and are more likely to be in school and less likely to be working full time.

» Wagner-Peyser Program Overview

The Wagner-Peyser Act of 1933 established a nationwide system of public employment offices known as the Employment Service. In North Carolina, the Division of Workforce Solutions provides oversight and operational responsibility for the state's Wagner-Peyser Act program. This program provides labor exchange services such as job search assistance, job referral, and placement assistance for job seekers; re-employment services for unemployment insurance claimants; and job recruitment assistance for employers. Specialized services are offered to veterans, individuals with disabilities, migrant and seasonal farmworkers, ex-offenders, youth, minorities and older workers. A range of other services are also available to meet the needs of both job seekers and employers, including skill, ability, and aptitude assessments; career guidance; assistance with job restructuring; and helping employers deal with layoffs.¹⁰

In 2015, the Workforce Innovation and Opportunity Act (WIOA) took effect, with the Wagner-Peyser Program designated as a core program participant providing services at American Job Centers. The WIOA integrated service delivery model emphasizes co-enrollment of customers in both Wagner-Peyser and WIA/WIOA Adult program when eligibility criteria permit.

» Wagner-Peyser Program Outcomes

As shown in Figure 13, the number of program participants in the Wagner-Peyser program decreased between the 2014-2015 and 2016-2017 program years followed by a noticeable increase through the 2018-2019 program year. Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

Figure 13. Wagner-Peyser Program Participants and Exiters by Program Year

¹⁰ U.S. Department of Labor Employment and Training Administration, www.doleta.gov/wioa/

Employment and wage outcomes were derived for each cohort of Wagner-Peyser program exiters. Analyses included the post-exit employment rates (Figure 14) and wages (Figure 15) for up to five years after exit (also see Table 4).

One-year post-exit employment rates were fairly stable across cohorts, ranging from a low of 73% for the 2014-2015 program year exiters to a high of 76% for the 2016-2017, 2017-2018, and 2018-2019 program year exiters (Figure 14 and Table 4). The percentage of exiters subsequently enrolling in NC public higher education one year after exiting the program also remained fairly stable at 10-12% for each of the five cohorts (Table 4). Longer term post-exit employment measures indicate that each exiting cohort had decreasing percentages of employment in North Carolina over time, which is common to almost all workforce and education programs.

Figure 14. Percentage of Wagner-Peyser Exiters Employed in North Carolina After Exit, by Year of Exit

One-year post-exit median wages peaked for the 2017-2018 cohort at \$19,001, then decreased to \$18,628 for exiters from the 2018-2019 program year (Figure 15 and Table 4). Within all cohorts, median annual wages increased over time. For example, the 2014-2015 cohort experienced wage growth from \$17,539 to \$22,077 and to \$25,592 at one, three, and five post-exit years, respectively.

As shown in Figure 16, one-year employment outcomes by industry indicate that 34% of 2018-2019 Wagner-Peyser program exiters were employed in the Professional and Business Services industry, earning a median annual wage of \$6,097. Other top employing industries include Manufacturing (21%), Leisure and Hospitality (19%), Retail Trade (17%), Health Care and Social Assistance (15%), and Wholesale Trade, Transportation, and Utilities (10%). Of these industries, Manufacturing accounted for the highest median annual wage (\$17,703).

Figure 15. Median Wage of Wagner-Peyser Program Exiters in North Carolina, by Year of Exit

Figure 16. 2018-2019 Wagner-Peyser Exiters One Year Post-Exit: Employment and Median Wage by Industry

Overall, one-year post-exit employment rates and median wages remained fairly stable for Wagner-Peyser participants. When individual cohorts are followed over time, employment rates tend to decline, while median wages rise. The median wage of Wagner-Peyser participants exiting in the 2014-2015 program year was \$17,539 one year after exit and \$25,592 after five years. By contrast, the 2019 median annual wage in North Carolina for all wage earners covered by unemployment insurance was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.¹¹

¹¹ Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey). Source of poverty guidelines: U.S. Department of Health & Human Services, <https://aspe.hhs.gov/2019-poverty-guidelines>

» Summary and Recommendations

The Division of Workforce Solutions (DWS) offers a broad spectrum of services to several customer groups, and programs described in this section provide different types of services to different customers. Although there is some overlap of services or customer groups between programs, and some common trends indicating their interrelationship, caution should be exercised when comparing the outcome measures of these programs.

The number of participants served under the WIA/WIOA Adult program peaked at over 100,000 participants in the 2014-2015 and 2015-2016 program years and has since declined to around 10,000 participants per program year. Likewise, the WIA/WIOA Dislocated Worker program saw a large spike in participation in 2014-2015, and then dropped to much lower levels the following year. These sharp changes in program participation likely reflect transition from WIA to WIOA programs including efforts to integrate service delivery and leverage resources across the multiple programs that a given customer may be eligible for, as well as changes in how DWS measures “participation” for WIOA reporting purposes.

Changes in program participation occurred alongside shifts in the outcomes of program exiters, particularly for the WIA/WIOA Adult program. This program saw a sudden decline in the share of exiters subsequently enrolling in public higher education in their post-2015 cohorts. The shift in outcomes was also apparent in these exiters’ industry of employment; while earlier cohorts were concentrated in Manufacturing and lower-paying Professional and Business Services jobs (a sector which includes temporary help agencies), post-2013 cohorts were more likely to be employed in the Health Care and Social Assistance sector.

More research is needed to determine whether these shifts in outcomes reflect changes in the nature of services provided, a different composition of program participants after service integration, changes in reporting, or changes in the overall economy of North Carolina. Further study of service integration is recommended, including changes in the types of services provided and customers served, and the relative performance of different types of services (or combinations thereof). The shift in industries employing WIA Adult program exiters away from the Manufacturing sector also suggests that an examination of the alignment between workforce programs and the needs of the labor market may be merited particularly since Manufacturing provides higher wages to program exiters than some other industries.

The WIA/WIOA Youth and Adult programs exhibited outcome trends that were consistent with a tightening labor market in 2015-2019. These programs saw continuous increases in wage earnings, increasing rates of employment in the state, and declining rates of enrollment in public higher education between the 2014-2015 and 2018-2019 cohorts, which may be due in part to the gradual expansion of employment opportunities for young, unemployed, and underemployed workers and those with other barriers to employment.

Further study of the services received by and the outcomes of WIA/WIOA Adult and WIA/WIOA Dislocated Worker participants, as well as other DWS customer groups that are underemployed or unemployed, may be beneficial. The current economic shock brought by the COVID-19 pandemic is rearranging North Carolina’s labor market. Maintaining and analyzing up to date data on program participation and industry employment needs will be critical to support recovery for North Carolina residents and businesses.

The Department of Health and Human Services

Division of Social Services

» Work First Program Overview

North Carolina's Temporary Assistance for Needy Families (TANF) program is called Work First. Work First provides time-limited cash assistance (up to 24 months) to needy families with children who meet eligibility requirements. Work First is based on the foundational premise that parents have a responsibility to support themselves and their children. Through Work First, parents can receive short-term training and other related services that can help them become employed and self-sufficient.¹² Work First emphasizes three strategies: diversion, shortening the time of assistance, and retention. Diversion strategies focus on keeping families off cash assistance by helping them with unexpected emergencies and setbacks. Strategies to shorten assistance include making work mandatory and limiting the time a family can receive assistance. Retention strategies to help keep families off assistance encourage savings and provide employment-related services, transportation assistance, short-term skills training, and family enrichment services.¹³ With the implementation of WIOA, Work First became a required partner in the One-Stop career centers.

» Work First Program Outcomes

The number of individuals participating in or exiting Work First trended downward between the 2014-2015 and 2017-2018 program years before a slight increase in the 2018-2019 program year (Figure 17). Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

Figure 17. Work First Program Participants and Exiters by Program Year

Figures 18 and 19 show employment and wage outcomes for Work First program participants by year of exit (also see Table 5). One-year post-exit employment rates increased progressively for the first four program

¹² North Carolina Division of Social Services, <http://www.ncdhhs.gov/dss/workfirst/index.htm>

¹³ Ibid.

years, from 71% for the 2014-2015 program year exiters to 74% for the 2017-2018 program year exiters before dropping to 68% for 2018-2019 program year exiters. One-year post-exit median wages basically increased over the program years from \$8,289 in the 2014-2015 program year exiters to \$8,948 in 2018-2019 with a slight dip in 2015-2016 to \$8,228 and a slight rise in 2017-2018 to \$9,012.

Figure 18. Percentage of Work First Program Exiters Employed in North Carolina After Exit, by Year of Exit

Figure 19. Median Wage of Work First Program Exiters in North Carolina, by Year of Exit

Within cohorts, employment rates decreased while median wages increased over time, a phenomenon common to almost all workforce programs. For example, the employment rates of the 2014-2015 cohort dropped from 71% one year after exit to 66% five years after exit, while their median annual wages increased from \$8,289 one year after exit to \$12,295 in year five.

Work First program exiters earned low wages across all industries. Figure 20 and Table 5 show that 39% of 2018-2019 exiters were employed in Leisure and Hospitality, followed by Professional and Business Services

(36%), Retail Trade (24%), Health Care and Social Assistance (24%), and Manufacturing (10%). Of these industries, Health Care and Social Assistance paid the highest median annual wage (\$6,886).

Figure 20. 2018-2019 Work First Program Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

» Summary and Recommendations

Overall, the findings reported above are consistent with a growing economy and tightening labor market through the 2017-2018 program year. The data show a decrease in the number of Work First participants through the 2017-2018 program year followed by an increase, and a corresponding increase in short-term employment rates and median wages for program exiters across cohorts. However, each of these data trends exhibited slight reverse in the 2018-2019 program year.

A stated goal of the Work First program is to assist individuals in becoming economically self-sufficient. We find that Work First program exiters experience low employment and wage outcomes, with wages below established federal poverty guidelines and employment rates well below the statewide average. More research is needed to establish the impact of the Work First program on participants, who might have barriers to employment that precede their time in the program.

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

Division of Vocational Rehabilitation Services

» Program Overview

The North Carolina Division of Vocational Rehabilitation Services (DVRS) is responsible for the general state vocational rehabilitation services program under Title I, Part B of the Rehabilitation Act of 1973 as amended. It is also responsible for the state supported employment services program under Title VI, Part B, of this same act. The Rehabilitation Act of 1973, as amended, was part of the Workforce Information Act. In July of 2014, the Workforce Innovation and Opportunity Act (WIOA) was signed into law and made significant changes to Title I of the Act that affects the Vocational Rehabilitation (VR) program. WIOA strengthens the alignment of the VR program with other core components of the workforce development system and emphasizes the achievement of competitive integrated employment as well as the provision of services to students and youth with disabilities.

The Division of Vocational Rehabilitation Services provides counseling, training, education, transportation, job placement, assistive technology, and other support services to people with disabilities through seventy-two local offices, two vocational rehabilitation training facilities, and public school systems throughout North Carolina.¹⁴ These services are provided to people with a wide range of physical, psychiatric, or intellectual disabilities, deafness or auditory impairment, and other communicative disorders. Services are provided to individuals to assist them with finding a job and staying on the job. Some services are provided based on economic need, while others are provided regardless of income.

For a person to be eligible for Vocational Rehabilitation services they must have a physical, mental, or intellectual impairment that limits their opportunities to find or keep a job, and require Vocational Rehabilitation program services for job preparation, search, or retention. Individuals who are receiving Social Security Disability Insurance or Supplemental Security Income benefits are presumed eligible for Vocational Rehabilitation program services if they intend to get or keep a job.¹⁵

» Vocational Rehabilitation Program Outcomes

As shown in Figure 21, the number of individuals exiting the Vocational Rehabilitation program fluctuated between a high of 57,292 in 2015-2016 program year to a low of 43,796 in 2017-2018.

Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

Employment (Figure 22) and wage outcomes (Figure 23) were examined separately for each cohort exiting the Vocational Rehabilitation program, for up to five years after exit (also see Table 6). One-year post-exit employment rates fluctuated across cohorts, ranging from a low of 50% for 2015-2016 program year exiters to a high of 55% for 2017-2018 program year exiters. One-year post-exit median annual wages also fluctuated, ranging from \$7,876 for 2016-2017 exiters to \$8,955 for 2018-2019 exiters.

Figure 21. Vocational Rehabilitation Program Participants and Exiters by Program Year

Longer term post-exit employment and wage measures indicate a slight decrease in the percentage of each exiting cohort who were employed in North Carolina over time. Wages, however, increased over time within each exiting cohort. The 2014-2015 exiters saw median annual wages increase from \$8,854 at one-year post-exit to \$10,677 and \$12,812 at three- and five-years post-exit, respectively. The 2015-2016 exiters had an increase in median wages from \$8,632 one year after exit to \$10,783 in year three.

Figure 22. Percentage of Vocational Rehabilitation Program Exiters Employed in North Carolina After Exit, by Year of Exit

Figure 23. Median Wage of Vocational Rehabilitation Program Exiters in North Carolina, by Year of Exit

For one-year post-exit wage and employment outcomes by industry (Figure 24) for the 2018-2019 Vocational Rehabilitation program exiters, the top employing industries include Leisure and Hospitality (32%), Professional and Business Services (25%), Retail Trade (22%), Health Care and Social Assistance (16%), and Manufacturing (10%). Of these, Manufacturing has the highest median wage at \$9,167.

Figure 24. 2018-2019 Vocational Rehabilitation Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

» Summary and Recommendations

Overall, the results indicate that there have been relatively stable short-term employment rates and median wages for Vocational Rehabilitation program exiters, as indicated by the one-year post employment and wage trends. However, when exiters are followed over time, median wages rise while the employment rate declines somewhat. This decline could be attributable to several factors including people not sustaining

employment, moving out of state, or finding employment in jobs not covered by North Carolina's unemployment insurance laws. There are a variety of reasons why individuals are not found in UI-covered employment including retirement, death, and inability to find employment, or leaving the labor force.

The 2019 median annual wage in North Carolina for all wage earners covered by unemployment insurance was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.¹⁶ Median wages for DVRS program exiters are shown in Table 6 and range from a low of \$7,876 for 2016-2017 program exiters one year after exit, to a high of \$12,812 for 2014-2015 exiters five years post-exit. These are well below the typical annual income in North Carolina and near or below the U.S. poverty line.

It is important to keep in mind that people participating in rehabilitation services through the DVRS have disabilities or communicative disorders which may impact the number of hours they can work and their ability to maintain employment. These factors may contribute to the low post-exit wage rates for this program. Further analyses are recommended to assess the various disability categories to determine if there are differential outcomes by type or severity of disability. In addition, further analyses by region are needed in order to determine if there are geographical disparities in outcomes.

A requirement of the new WIOA is the development of an Integrated Service Delivery plan that coordinates service delivery between WIOA, Wagner-Peyser, Adult Basic Education and Vocational Rehabilitation programs. It is recommended that North Carolina's plan and its implementation focuses on leveraging resources and services across programs, and achieving both higher employment and wage outcomes and acquiring increased occupational skills and educational credentials for all participants.

¹⁶ Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey). Division of Services for the Blind

» Program Overview

The Division of Services for the Blind (DSB) provides vocational rehabilitation services to help individuals who are blind, have low vision, or who are deaf-blind reach their goals of independence and employment.¹⁷ Together with DVRS, DSB is responsible for the state vocational rehabilitation services program under Title I, Part B of the Rehabilitation Act of 1973; for the state-supported employment services program under Title VI, Part B of this act; and for providing partner services under WIOA.

DSB services help individuals find a job, keep a job, return to work, and advance in employment, and are tailored to the unique vocational assistance needs of those with vision loss or impairment. Individuals can choose from an array of programs and services that best suit their individual vocational needs.¹⁸ DSB vocational services include but are not limited to career assessments and counseling, educational and job training, job development and placement assistance and address the specialized skills and technologies required by workers and job seekers with visual loss or impairment, encompassing a wide range of job and mobility trainings, coaching services, and assistive technologies. Some services are provided based on economic need, while others are provided regardless of income. Services are provided through staff located in seven district offices and the DSB Career and Training Center, and through third-party agreements with local school districts.

» DSB Vocational Rehabilitation Program Outcomes

As shown in Figure 25, the number of individuals receiving vocational rehabilitation services through DSB fluctuated from a low of 2,640 in the 2017-2018 to a high of 3,245 in the 2015-2016 program year.

Figure 25. DSB Vocational Rehabilitation Program Participants and Exiters by Program Year

¹⁷ Division of Services for the Blind, <http://www.ncdhhs.gov/dsb>

¹⁸ Division of Services for the Blind, Vocational Rehabilitation for the Blind, <https://www.ncdhhs.gov/assistance/vision-loss/vocational-rehabilitation-for-blind>

Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit. Analyses included the development of post-exit employment rates (Figure 26) and wage statistics (Figure 27) for up to five years after exit (also see Table 7). One-year post-exit employment rates ranged from a low of 43% for the 2016-2017 exiters to a high of 60% for the 2017-2018 exiters. One-year post-exit median wages also fluctuated over time, ranging from \$14,639 for the 2014-2015 program year exiters to a high of \$17,614 for the 2017-2018 exiters.

Figure 26. Percentage of DSB Vocational Rehabilitation Program Exiters Employed in North Carolina After Exit, by Year of Exit

Figure 27. Median Wage of DSB Vocational Rehabilitation Program Exiters in North Carolina, by Year of Exit

Longer term post-exit employment and wage measures show decreasing employment rates, combined with increasing wages over time, for all cohorts, a pattern common to all workforce development programs. While decreases in post-exit employment follow a similar trend for all cohorts, there was no consistent pattern for wage increases across cohorts.

One-year post-exit wage and employment outcomes by industry (Figure 28) for the (2018-2019) cohort of Services for the Blind Vocational Rehabilitation program exiters, shows Retail Trade is the largest employing industry for exiters (22%) followed by Health Care and Social Assistance, and Leisure and Hospitality employing 20% each; then Professional and Business Services (16%) and Manufacturing (13%). Of these, Manufacturing has the highest annual median wage at \$19,283.

Figure 28. 2018-2019 DSB Vocational Rehabilitation Program Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

» Summary and Recommendations

Overall, the results show fluctuations in the short-term employment rates and median wages for DSB program exiters. This is indicated by the one-year post-exit employment and wage trends. However, when exiters are followed over longer periods of time the employment rate tends to decline. This is a common trend to many other workforce training and education programs and could be attributable to several factors, including people not sustaining employment, moving out of state, or finding employment in jobs not covered by North Carolina's unemployment insurance laws.

Over time, the median wages of DSB exiters increased within each cohort. For example, the 2014-2015 cohort saw one-year post-exit median wages of \$14,639 increase to \$16,969 five years post exit. By contrast, the 2019 median annual wage in North Carolina for all wage earners covered by unemployment insurance was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.¹⁹ While the annual median post-exit wage of DSB clients is below the state's annual

¹⁹ Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey).

median, it exceeds the federal poverty guidelines each year for a one-person household and for the two-person household by year five, and shows annual growth for those individuals who are employed after exit.

As previously noted, part of the requirement of the new WIOA is the development of an Integrated Service Delivery plan that includes the coordination between WIOA, Wagner-Peyser, Adult Basic Education and Vocational Rehabilitation programs. It is recommended that North Carolina's integrated service delivery plan and implementation continue to focus on the leveraging of resources and services across these programs and focus on achieving higher employment and wage outcomes for all participants and the acquisition of increased occupational skills and educational credentials.

North Carolina Community College System (NCCCS)

Career and Technical Education (CTE) Programs

» Overview of CTE Programs

North Carolina's Community Colleges offer a diverse set of programs aimed at minimizing barriers to high-quality post-secondary education and developing a competent workforce. Curriculum programs range in length from one semester to two years and include a wide variety of programs offered within the area of Applied Sciences, as well as College Transfer and General Education programs in areas including, but not limited to, Arts and Sciences.

Academic credentials conferred by curriculum programs may include certificates, diplomas, or associate degrees, depending on the specific area and program.²⁰ Certificate programs are curriculum programs designed to provide entry-level, employment-related training, ranging from 12 to 18 semester credit hours, and with full-time enrollment can usually be completed within one semester. Diploma programs are longer curriculum programs also designed to provide entry-level employment-related training. They range from 36 to 48 semester credit hours, and with full-time enrollment can usually be completed within two semesters and one summer session. Associate degree programs are planned academic curriculum programs designed to provide students with employment-related training or academic preparation for college transfer to a four-year institution. Associate degree programs typically include 60 to 76 semester credit hours and can usually be completed within four semesters by a full-time student.

This report focuses on Career and Technical Education (CTE) programs as they are related to employment and workforce training. CTE programs are a subset of Applied Science curriculum programs.

All of North Carolina's community colleges offer applied science programs. Over 200 certificate, diploma, and associate degree programs are offered in applied sciences, with each of these courses of study falling into one of ten broad fields: agricultural and natural resource technologies, biological and chemical technologies, business technologies, commercial and artistic production technologies, construction technologies, engineering technologies, health sciences, industrial technologies, public service technologies, and transport systems technologies.

Nearly all of the curriculum programs in the applied sciences receive funding through the U.S. Department of Education's Carl D. Perkins Career and Technical Educational Act of 2006; in this report, these are referred to as Career and Technical Education programs.²¹ The Perkins Act is intended to more fully develop the academic, vocational, and technical skills of secondary and postsecondary students who elect to enroll in vocational and technical education programs. The North Carolina Department of Public Instruction (DPI) is the recipient of the Federal Perkins Act funds and works in collaboration with the North Carolina Community College System to

²¹ The Strengthening Career and Technical Education for the 21st Century (Perkins V) Act replaces the Perkins Act of 2006 (Perkins IV). This went into effect on July 1, 2019.

implement and deliver the programs and activities required under the Perkins Act. Funding is split between DPI and NCCCS. Perkins Act programs are also required partners under WIOA.

» CTE Associate Degree Program Outcomes

As shown in Figure 29, participation in CTE associate degree programs declined steadily throughout the period studied, with the number of students decreasing from 111,059 in the 2014-2015 program year to 86,717 in 2018-2019. Students who were recorded as having graduated from an associate degree program were defined as program completers/graduates, and their subsequent wages and employment outcomes were tracked post completion. The number of CTE associate degree program completers dropped slightly throughout the study period.

Figure 29. NCCCS CTE Associate Degree Program Participants and Completers by Program Year

The rate of employment in North Carolina one year after graduation consistently stayed at 84% to 85% across all cohorts, while the rate of subsequent enrollment in public higher education programs remained steady at 29% to 30% (Figure 30 and Table 8). Both employment rates and subsequent enrollment one year after graduation showed minimal fluctuation across cohorts.

Figure 30. Percentage of NCCCS CTE Associate Degree Completers Employed in North Carolina After Degree Conferral, by Year of Graduation

Wage earnings at one year after graduation increased with each successive cohort (Figure 31). Median wage earnings increased from \$25,800 for the cohort graduating in 2014-2015 to \$30,806 for the cohort graduating in 2018-2019 (Table 8).

Figure 31. Median Wage of NCCCS CTE Associate Degree Completers in North Carolina, by Year of Graduation

In all cohorts examined here, the share of CTE associate degree recipients employed in North Carolina declined slightly when followed over time; for instance, the employment rate for 2014-2015 graduates declined from 84% after one year to 77% after five years (Table 8). Those who were employed in North Carolina saw their wages continue to increase in each year after graduation. For example, the annual median wage for the 2014-2015

cohort increased by 46% (from \$25,800 to \$37,760) over five years. CTE associate degree program graduates were by far most likely to be employed in the Health Care and Social Assistance sector, due in part to the large number of students graduating from health science programs (see Appendix Tables 1, 2, 3, and 4); this was also one of the top-paying industry sectors for graduates across all cohorts (Figure 32).

Figure 32. 2018-2019 NCCCS CTE Associate Degree Completers One Year After Graduation: Percentage Employed and Median Wage by Industry

The outcomes for CTE associate degree recipients varied by the program of study (see Appendix Tables 1, 2, 3, and 4). One year after graduation, the 2014-2015 cohort saw median wages ranging from \$13,565 for commercial and artistic production technologies majors to \$36,188 for health sciences majors (Appendix Table 1). By the fifth year after graduation, health sciences majors earned a median wage of \$47,101, the second highest after construction technologies graduates, who earned \$49,068 five years after graduation. NCCCS graduates earning an associate degree in health sciences also consistently had the highest rate of employment within North Carolina one year after graduation (ranging from 90% to 92%). This is consistent with the relatively higher employment rates and wages for associate degree recipients working in the Health Care and Social Assistance industry, as shown above in Figure 32 for the most recent cohort (also see Table 8).

Graduates of the largest CTE program area, business technologies, had relatively high employment rates of 80% in the first year for all cohorts, and their median earnings showed a steady increase (Appendix Tables 1-4). For the 2014-2015 graduating cohort, median wages increased from \$22,027 one year after graduation to \$33,510 in year five (Appendix Table 1).

Table 8. NCCCS CTE Associate Degree Participants and Completers, Outcomes One Through Five Years After Graduation, Overall and By Industry

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» CTE Diploma Program Outcomes

As shown in Figure 33, participation in CTE diploma programs was highest in the first year of the study (16,204 in the 2014-2015 program year) then remained fairly stable in the range between 14,742 and 14,959 in subsequent years. Students who were recorded as having graduated from a diploma program were defined as program completers/graduates, and their subsequent wages and employment outcomes were tracked post completion. The number of CTE diploma program completers fluctuated from year to year, ranging from 3,947 to 4,343.

Figure 33. NCCCS CTE Diploma Program Participants and Completers by Program Year

The rate of employment in North Carolina one year after earning a CTE diploma ranged from 83% to 85% (Figure 34 and Table 9). The rate of subsequent enrollment in public higher education programs ranged from 35% to 40%, with both employment and subsequent enrollment outcomes fluctuating from cohort to cohort (Table 9).

Wage earnings one year after graduation generally trended upward with each successive cohort (Figure 35 and Table 9), with the exception of a slight drop for the 2017-2018 graduating class. Median wage earnings rose from \$23,016 for the cohort graduating in 2014-2015 to \$26,367 for the 2018-2019 graduates.

Figure 34. Percentage of NCCCS CTE Diploma Recipients Employed in North Carolina After Completion, by Year of Graduation

Figure 35. Median Wage of NCCCS CTE Diploma Recipients in North Carolina, by Year of Graduation

The share of CTE diploma recipients from each cohort employed in North Carolina declined slightly over time, a common pattern across workforce training programs. For instance, the employment rate for 2014-2015 graduates declined from 83% after one year to 75% after five years. Of those CTE Diploma recipients who were employed, wages increased each year after graduation, another pattern shared across many workforce programs.

These graduates were by far most likely to be employed in the Health Care and Social Assistance sector (Figure 36), due in part to the large number of students graduating from health science programs. This was also one of the top-paying industries for graduates across all cohorts.

Figure 36. 2018-2019 NCCCS CTE Diploma Recipients One Year After Graduation: Percentage Employed and Median Wage by Industry

The outcomes of CTE diploma recipients varied widely by the program of study (see Appendix Tables 5, 6, 7, and 8). In the first year after graduation, the 2014-2015 cohort saw median wages ranging from \$11,817 for commercial and artistic production technologies majors to \$26,120 for health sciences majors (Appendix Table 5). By the fifth year after graduation, engineering technologies majors had the highest earnings with a median wage of \$46,869, health sciences majors' earnings ranked fifth among all majors at \$35,456, and artistic and production technologies graduates earned \$20,724. For all cohorts, health sciences graduates also had the highest employment rate within North Carolina, with one-year employment rates of 90% to 92% depending on the cohort. This is consistent with the much higher employment rate and relatively higher wages for CTE diploma recipients working in the Health Care and Social Assistance industry, as shown above in Figure 36 for the most recent cohort (also see Table 9).

Table 9. NCCCS CTE Diploma Program Participants and Completers, Outcomes One Through Five Years After Graduation, Overall and By Industry

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» CTE Certificate Program Outcomes

As shown in Figure 37, participation in CTE certificate programs increased steadily throughout the period studied, with the number of students growing from 22,275 in the 2014-2015 program year to 28,820 in 2018-2019. Students who were recorded as having graduated from a certificate program were defined as program completers/graduates, and their subsequent wages and employment outcomes were tracked post completion. The number of CTE certificate program recipients fluctuated by program year from a low of 15,800 in 2014-2015 to a peak in 2017-2018 of 17,762.

Figure 37. NCCCS CTE Certificate Program Participants and Completers by Program Year

The rate of employment in North Carolina one year after graduation ranged from 74% to 77%, while the rate of subsequent enrollment in public higher education programs ranged from 59% to 64% (Figure 38 and Table 10). Both outcomes fluctuated from cohort to cohort, showing no clear trend.

The share of CTE certificate recipients employed in North Carolina tended to decrease slightly over time for each graduating cohort, although this trend was neither as strong nor consistent as most other programs. For instance, the employment rate for 2014-2015 graduates increased from 76% one year after graduation to 77% two years after graduation before decreasing to 73% five years after graduation (Figure 38 and Table 10).

Figure 38. Percentage of NCCCS CTE Certificate Recipients Employed in North Carolina After Completion, by Year of Graduation

Wage earnings one year after graduation fluctuated across cohorts, with median wage earnings ranging from \$19,985 for the cohort graduating in 2015-2016 to \$22,245 for the 2018-2019 graduates (Figure 39 and Table 10). CTE certificate recipients employed in North Carolina saw their wages increase in each year after graduation for all years examined in this report (Figure 39 and Table 10).

Figure 39. Median Wage of NCCCS CTE Certificate Recipients in North Carolina, by Year of Graduation

For the most recent cohort (2018-2019), CTE certificate recipients' top industries of employment one year after graduation were Retail Trade (22%), Leisure and Hospitality (18%), Health Care and Social Assistance (18%), and Professional and Business Services (18%) (Figure 40). Recipients employed in Leisure and Hospitality had the lowest median earnings (\$4,750) of graduates in any sector. However, over time for each cohort, the percentage of CTE certificate recipients employed in Leisure and Hospitality and Retail Trade

declined while more found jobs in the relatively higher-paying Manufacturing and Public Administration sectors. For example, the 2014-2015 cohort fell from 21.3% to 13.4% in the Retail Trade sector and from 16.9% to 9.7% in the Leisure and Hospitality sector after five years and rose from 11.7% to 13.5% in Manufacturing and from 14.6% to 15.6% in Public Administration by four years. Although median wages generally rise over time for these cohorts, the Retail Trade and Leisure and Hospitality sectors have the lowest median wages by year five of \$14,108 and \$7,235, respectively. The two highest median wage rates by year five are Public Administration at \$44,862 and Manufacturing at \$38,600.

Figure 40. 2018-2019 NCCCS CTE Certificate Recipients One Year After Graduation: Percentage Employed and Median Wage by Industry

The outcomes of CTE certificate recipients varied by the program of study (Appendix Tables 9, 10, 11, and 12). The 2014-2015 cohort saw one-year post-graduation median wages ranging from \$11,391 for commercial and artistic production technologies majors to \$29,201 for biological and chemical technologies majors. Graduates of the largest two programs offered by NCCCS for the 2018-2019 program year, business technologies and public service technologies, earned \$24,074 and \$21,050, respectively, in their first year after completion. Biological and chemical technologies, while the smallest NCCCS certificate program in terms of enrollment, is one of the top-earning program areas, with first-year median wages reaching \$26,816 for the 2018-2019 cohort of certificate recipients.

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» Summary and Recommendations

The outcomes of CTE program graduates were generally positive. CTE associate degree, diploma, and certificate recipients have seen their wages increase in each year after graduation, and each cohort tended to earn more in each year than the prior cohort.

Between the 2014-2015 and 2018-2019 program years, CTE certificate programs have experienced a significant increase in enrollment and completion while associate degree programs experienced a declining enrollment and the number of CTE diploma enrollees fluctuated. This could possibly be attributed to the tightening labor market, with more individuals choosing to pursue employment opportunities rather than taking a year or more to upgrade their education and skills.

There is still a gap between the number of students participating in CTE associate degree programs each year and the smaller number of students graduating each year. This may reflect in part the large number of associate degree students who attend part time and thus have a long time to completion. Additionally, given the tight labor market in the period from 2014 to 2019, it could be that greater numbers of community college program participants were being hired prior to receiving their credential as the economy improved and employers struggled to find qualified talent.

Although this report examines only outcomes of program completers, it is possible that students who complete some coursework but do not attain credentials have an advantage in the labor market over those who take no coursework at all.

It is important to keep in mind that the variation in outcomes between different areas of study and different degree levels should be interpreted with caution as the student body may vary significantly in terms of demographics, employment history, and other social or economic aspects across different community colleges programs.

Continuing Education

Continuing education programs operated by the North Carolina Community Colleges include non-credit courses related to a diverse set of occupation-specific training, workforce development training, community service training, and business and industry training programs. Courses are designed to assist individuals in gaining short-term training and skill enhancement including occupational skills, entrepreneurial skills, personal growth and development. Organized within the North Carolina Community College System's continuing education programs are several programmatic areas including Workforce Continuing Education training and Human Resources Development.

» Overview of Workforce Continuing Education Programs

Workforce Continuing Education training programs provide a variety of non-credit courses organized under several topical areas. These areas include: agricultural and natural resources; business and computer training; construction; education and language; health; industrial/manufacturing; public safety; transport technology; and service occupations. Workforce Continuing Education programs consist of one or more courses designed to train an individual for full- or part-time employment, upgrade the skills of incumbent workers, or retrain individuals for new employment in a different occupation or industry. Course and program offerings provide instruction focused on skill competencies that may lead to a recognized credential (licensure, certification, renewal, registry listing) and/or meet local workforce needs.

» Workforce Continuing Education Program Outcomes

Analyses revealed a steady decline in the number of Workforce Continuing Education participants across the program years (Figure 41 and Table 11). Enrollment in these programs was at a five-year high of 176,798 during the 2014-2015 program year and declined slowly each year to 160,768 in 2018-2019. Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit. The number of exiters across this time period reflected a similar decline across the five-year time period.

Figure 41. NCCCS Workforce Continuing Education Program Participants and Exiters by Program Year

Employment and wage outcomes were derived for each cohort of Workforce Continuing Education program year exiters for up to five years after exit. As shown in Figure 42, one-year post-exit employment rates for Workforce Continuing Education program participants increased across the five years, ranging from 74% for the 2014-2015 program year exiters to a high of 78% for the 2018-2019 program year exiters. When considering a longer time horizon for a cohort, this percentage showed a slight decline, a trend common to most workforce programs. For example, while 74% of 2014-2015 program year completers were employed after one year, only 65% were employed in North Carolina after five years.

Figure 42. Percentage of NCCCS Workforce Continuing Education Program Exiters Employed in North Carolina, by Year of Exit

One-year post-exit median wages are higher for each successive cohort from a low of \$26,790 for the 2014-2015 program year exiters to a high of \$30,915 for the 2018-2019 program year exiters (Figure 43). Over

time, median post-exit earnings exhibited steady progress for all Workforce Continuing Education exiters cohorts. For example, for the 2014-2015 program year cohort, median wages rose each year, from \$26,790 in their first year after completion to \$36,126 in year five.

Figure 43. Median Wage of NCCCS Workforce Continuing Education Program Exiters in North Carolina, by Year of Exit

Figure 44 summarizes one-year outcomes by industry for the most recent cohort of exiters (2018-2019). It shows that Public Administration (23%) and Health Care and Social Assistance (21%) were the two most common industries of employment for Workforce Continuing Education participants. Public Administration, provides the highest pay (median annual wage of \$43,379), placing it 46% more than Manufacturing, the second highest paying industry. For comparison, the 2019 median annual wage in North Carolina for all wage earners covered by unemployment insurance was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.²²

²² Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey). Source of poverty guidelines: U.S. Department of Health & Human Services, <https://aspe.hhs.gov/2019-poverty-guidelines>

Figure 44. 2018-2019 Workforce Continuing Education Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

» Summary and Recommendations

Overall, the results indicate that there have been rising one-year post-exit employment rates and median wages for Workforce Continuing Education program exiters. When exiters are followed over time, the employment rate tends to decline somewhat. This decline could be attributable to several factors including people not sustaining employment, moving out of state, or finding employment in jobs not covered by North Carolina's unemployment insurance laws. There are a variety of reasons why individuals are not found in covered employment, including retirement, death, inability to find employment, leaving the labor force, or taking non-UI covered employment. However, the median wages of Workforce Continuing Education program exiters continue to rise over time.

One suggested area for further investigation is the examination of industrial and occupational credentials obtained by participants in Workforce Continuing Education and other workforce development programs. While Workforce Continuing Education programs do not typically offer an academic credential, they do provide critical training that can lead to occupational or industry certifications. At the present time, there is no central repository of information regarding industry and occupational credentials by individual. It is recommended that the North Carolina Community College System work with the Department of Commerce and local community colleges to determine if this information exists at the local colleges or could be accessed through other informational resources such as North Carolina's Licensing Boards. Information regarding occupational and industrial credentials is needed to further study the role that the Workforce Continuing Education and other workforce development programs play in helping workers access key skills and credentials.

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» Overview of Human Resources Development Programs

Human Resources Development (HRD) programs operated by the North Carolina Community Colleges consist of instructional programs targeting unemployed and underemployed adults. HRD training focuses on the assessment and development of employability competency skills identified as “essential” for the workplace. Skill development is accomplished through a variety of training-related activities and services, including self-esteem and goal-setting activities, career exploration and planning of educational and employment opportunities, resume and job application preparation, interviewing techniques, job referral and placement services, basic skills review, placement test review, and study skills strategies. Some community college HRD programs focus on short-term skills training, computer literacy, clerical skills, word processing, customer service, childcare, home health care, hospitality, tourism training, or other skills training matched to local workforce needs.²³

HRD programs are often provided in conjunction with, or as a part of, a participant’s enrollment in other workforce development programs. For example, some WIA or WIOA participants who receive career services receive part of these services through their enrollment in HRD programs. HRD programs often provide an initial opportunity for students who have not participated in educational or training programs for many years. This initial participation may lead to further enrollment in other educational and training programs.

» Human Resources Development Programs Outcomes

As shown in Figure 45, analyses revealed a steady, significant decline in the number of participants in HRD programs between the 2014-2015 and 2018-2019.

Figure 45. NCCCS Human Resources Development Program Participants and Exiters by Program Year

Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit,

²³ North Carolina Community College System, <http://www.nccommunitycolleges.edu/academic-programs/nc-community-college-system-catalog>

for each cohort. These included measures of post-exit employment rates (Figure 46) and wage statistics (Figure 47) for up to five years after exit (also see Table 12). These measures include only those individuals who were employed in North Carolina in jobs covered by the state’s unemployment insurance laws.

One-year post-exit employment fluctuated across the five cohorts, ranging from 67% in 2014-2015 and 2015-2016 to 71% in 2017-2018 (Figure 46 and Table 12). One-year post-exit median wages ranged across all cohorts from \$11,837 for the 2014-2015 cohort to \$13,499 for the 2017-2018 cohort.

Figure 46. Percentage of NCCCS Human Resources Program Exiters Employed in North Carolina After Exit, by Year of Exit

Longer term post-exit employment and wage measures indicate that five years after exit, 59% of the 2014-2015 exiting cohort were employed in North Carolina. Post-exit employment rates were relatively stable across cohorts for a given post-exit year, while the median post-exit wage increased over time across all cohorts. The 2014-2015 exiters experienced a growth in median wages from \$11,837 one year after exit to \$16,320 in year three and \$19,758 at the five-year mark, while the 2016-2017 exiters saw median wages grow from \$13,100 one year after exit to \$18,162 in year three.

Figure 47. Median Wage of NCCCS Human Resources Program Exiters in North Carolina, by Year of Exit

In looking at one-year outcomes by industry for the most recent cohort of exiters (2018-2019 program year), the largest group (32%) of HRD program exiters found employment in the Professional and Business Services industry (a sector which includes temporary help agencies), earning a median wage of \$4,321 (Figure 48 and Table 12). Other top industries employing this cohort one-year post exit include Leisure and Hospitality (24%), Health Care and Social Assistance (20%), Retail Trade (19%), and Manufacturing (18%). Of these, Manufacturing was associated with the highest median annual wage (\$10,859).

Figure 48. 2018-2019 NCCCS Human Resources Development Program Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

Overall, the results indicate that there have been fluctuations in short-term employment rates and short-term wage outcomes for HRD program exiters. This is indicated by the one-year post-employment and wage

trends. When exiting cohorts are followed over time, the employment rate decreases while the median wages rise. The median wage of HRD program participants who exited in the 2014-2015 program year was \$11,837 one year after exit, rising to \$19,758 five years after exit. By contrast, the 2019 median annual wage in North Carolina for all unemployment insurance-covered workers was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.²⁴

» Summary and Recommendations

The post-exit outcomes of NCCCS HRD program participants trended in a favorable direction for the first four years investigated, but for the fifth year results were mixed. For the 2018-2019 cohort, participation (35,565) and one-year post-exit median wages (\$13,306) were lower than for the previous cohort but exiters in public higher education, employment, or training program was higher than other cohorts at 57%.

The rate of subsequent enrollment by HRD exiters in public higher education programs remained relatively consistent over the study period from 22% to 24%. Still, HRD exiters show greater levels of enrollment in higher education than participants of many other training programs, suggesting that many HRD program participants are subsequently pursuing pathways to further skill development.

To the extent that HRD programming varies by campus, additional analysis might be merited to assess whether the services offered through local HRD programs are aligned with the needs of the local labor market.

²⁴ Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey). Source of poverty guidelines: U.S. Department of Health & Human Services, <https://aspe.hhs.gov/2019-poverty-guidelines>

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» Overview of Basic Skills Programs

The Basic Skills programs operated by the North Carolina Community Colleges include a group of education programs designed to assist adults with the acquisition of basic educational skills. Programs offered under the Basic Skills designation include Adult Basic Education (ABE); Adult Secondary Education (ASE), including High School Equivalency and Adult High School Diploma programs; and English as a second language (ESL).²⁵ In July of 2014, the Workforce Innovation and Opportunity Act (WIOA) was signed into law. The WIOA supersedes the Workforce Investment Act of 1998 and amends the Adult Education and Family Literacy Act, which authorizes programs offered through North Carolina's Basic Skills programs.

Adult Basic Education (ABE) is a program of instruction designed to assist adults 16 or older who function below the high school level with instruction in reading, writing, math, and English. Adults with intellectual disabilities are also served by the ABE program provided they have a formal diagnosis and show progress in the program.

The Adult Secondary Education (ASE) program is designed to prepare adults, 18 or older, for further education or transition toward skill obtainment and employment and includes both the Adult High School (AHS) and the High School Equivalency (HSE) Diploma programs.²⁶ The AHS program consists of classroom instruction, learning laboratory courses, and distance education to assist adults with obtaining an Adult High School Diploma. The HSE program offers instruction to assist learners who are preparing to take a high school equivalency exam such as GED®, HiSET®, or TASC.

English as a Second Language is a program to assist adults who have limited English proficiency, and includes instruction in English language listening, speaking, reading, writing, and comprehension.²⁷

» Program Outcomes

Employment and wage outcome measures were calculated for each cohort of participants exiting the Basic Skills programs. Participants who were not enrolled in a Basic Skills program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit. Results indicated that the number of Basic Skills participants and exiters declined noticeably over the five-year time period (Figure 49).

Figure 49. NCCCS Basic Skills Program Participants and Exiters by Program Year

Figures 50 and 51 show the employment and wage outcomes for Basic Skills program exiters by program year (also see Table 13). Short-term outcomes at one year after program exit show increases in employment rates and median wages across cohorts. One-year post-exit employment increased from 54% for the 2014-2015 exiting cohort to 60% for the 2017-2018 cohort then slightly declined to 58% for the 2018-2019 program year cohort. One-year post-completion median wages for Basic Skills program completers rose from \$8,701 for the 2014-2015 cohort to \$9,706 for program year 2018-2019 exiters.

Longer-term post-exit employment measures show decreasing employment rates within the same cohort and increasing employment rates across different cohorts (Figure 50), trends that are common to most workforce training and education programs. Longer-term wage outcomes show wage increases both within and across cohorts (Figure 51). While the median post-completion wages were fairly low, all showed significant and regular increases over time for all cohorts. For all cohorts, median wages rose by 15% to 23% between the first and second post-exit years. In the later post-exit years, median wages for all cohorts kept growing at annual rates ranging from 6% to 10%.

Figure 50. Percentage of NCCCS Basic Skills Exiters Employed in North Carolina After Exit, by Year of Exit

Figure 51. Median Wage of NCCCS Basic Skills Program Exiters in North Carolina, by Year of Exit

Further analysis of one-year outcomes for the 2018-2019 exiting cohort (Figure 52) reveals that the largest percentage of Basic Skills program exiters were employed in Leisure and Hospitality (36%) and Professional and Business Services (27%), which may include temporary help agencies, paying median annual wages of \$2,895 and \$2,818, respectively. While these are among the lowest-paid median wages for this cohort, they often represent temporary or part-time employment. The Public Administration sector provided the highest median wage (\$26,476) but employed few Basic Skills exiters (1.9). The next highest-paid industries were Manufacturing and Construction, paying \$10,411 and \$10,049 in median annual wages, respectively.

Figure 52. 2018-2019 NCCCS Basic Skills Program Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

» Summary and Recommendations

Overall, the results indicate that there have been stable employment rates across Basic Skills program year cohorts and participants over time. The post-exit median wage rates of Basic Skills participants are low; however, there are some increases over time. For example, the median wage for the 2014-2015 program year cohort was \$8,701 one year after exit, increasing to \$14,041 by year five. By contrast, the 2019 median annual wage in North Carolina for all unemployment insurance-covered workers was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.

²⁸ While post-exit wages are low, stable employment rates demonstrate a positive outcome for Basic Skills program credential recipients. In addition, the subsequent enrollment of Basic Skills programs exiters in further education is a positive outcome for the program. Between 9% and 16% of the participants were enrolled in additional public higher educational programs during the five years after exiting the program. This indicates that some individuals are continuing in additional skill development after gaining their high school credential.

As previously noted, part of the requirement of WIOA is the development of an integrated service delivery plan that includes the coordination between WIOA, Wagner-Peyser, Adult Basic Education and Vocational Rehabilitation programs. It is recommended that North Carolina's integrated service delivery plan and implementation continue to focus on the leveraging of resources and services across these programs and focus on achieving higher employment and wage outcomes for all participants and for increasing occupational skills and educational credentials.

²⁸ Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey). Source of poverty guidelines: U.S. Department of Health & Human Services, <https://aspe.hhs.gov/2019-poverty-guidelines>

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» Overview of Customized Training Program

The Customized Training (CT) Program began in 1958 as the New and Expanding Industry Training Program. In 2008, legislation was passed to combine the New and Expanding Industry Training Program, the Focused Industry Training Program, and the Customized Industry Training Program into one. The CT program was developed in recognition of the fact that a critical consideration for a business or industry considering locating, expanding, or remaining in North Carolina is the ability of the state to ensure the presence of a well-trained workforce.

The Customized Training Program supports the economic development efforts of the state by providing education, training, and support services for eligible new, expanding, and existing businesses and industries in North Carolina through the state's network of 58 community colleges serving all 100 counties. The program also provides services to individuals who are employed or seeking employment by an eligible business or industry. To qualify, businesses and industries must fall within the eligible clusters of manufacturing, technology intensive (i.e., information technology, life sciences), regional or national warehousing and distribution centers, customer support centers, air courier services, national headquarters with operations outside North Carolina, or civil service employees providing technical support to US military installations located in North Carolina.

Eligible businesses and industries must also demonstrate that they are making an appreciable capital investment; deploying new technology; creating jobs, expanding the existing workforce, or improving the productivity and profitability of the operation in the state; and enhancing workers' skills. Resources may support training assessment, instructional design, instructional costs, and training delivery for personnel involved in the direct production of goods and services, as well as those in production and technology support. Employees eligible for training also include full-time probationary employees of eligible companies. The use of Customized Training funds requires that trainees must be paid by the company for all training hours.²⁹

» Customized Training Program Outcomes

As shown in Figure 53, the number of participants in CT programs decreased from program years 2014-2015 to 2017-2018 before increasing in the 2018-2019 program year. Participants who were not enrolled in the program during any part of the year following enrollment were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

Figures 54 and 55 show the program employment and wage outcomes during the period studied (also see Table 14). The rate of employment in North Carolina one year after exit fluctuated from 89% for the 2015-2016 cohort to 94% for exiters of the 2017-2018 and 2018-2019 program years. Over time the employment rate declined slowly for all cohorts, a pattern common to almost all workforce training and education programs. For example, employment rates in North Carolina for the 2014-2015 exiting cohort decreased from 90% one year after exit to 77% five years after exit (Figure 54).

Median wages one year after exit fluctuated from a low of \$42,481 for the 2014-2015 cohort to a high of \$46,734 for the 2015-2016 program year. Longer-term wage outcomes, however, generally showed moderate wage growth within cohorts. For the 2014-2015 cohort, wages rose each year after exit for 4 years.

Figure 53. NCCCS Customized Training Program Participants and Exiters by Program Year

Figure 54. Percentage of NCCCS Customized Training Program Exiters Employed in North Carolina After Exit, by Year of Exit

The post-participation industries of employment for CT program exiters indicate that Manufacturing was the dominant employment industry, with both the largest number of employees and the highest wages with 76% of employment and a median wage of \$46,876 for the 2018-2019 cohort. As shown in Figure 56, Manufacturing was distantly followed by Professional and Business Services industry (11%; median wage of \$8,561); and Wholesale Trade, Transport, and Utilities (11%; median wage of \$32,398). Both three- and five-year post-exit industry employment rates reflect a similar trend (see Table 14). It's interesting to note that Financial Activities paid the most for the 2014-2015 and 2015-2016 cohorts with median wages in the \$55,000 range in the first year. By contrast, the 2019 median annual wage in North Carolina for all unemployment insurance-covered

workers was \$29,465, while the 2019 federal poverty guideline was \$12,490 for a one-person household and \$16,910 for a two-person household.³⁰

» Summary and Recommendations

The outcome measures for Customized Training program exiters indicate fairly high post-exit employment rates (ranging from 89% to 94% in the first year after exit) as compared to other workforce training programs examined in this report. While the annual median wages had slight fluctuations across program years, CT program exiters earned higher wages relative to exiters in other workforce training programs. Overall, the progressive growth in employment rates and wages demonstrate a positive outcome for the program.

When exiters are followed over longer periods of time, the employment rate tends to decline, as is common with most workforce programs. This may be due to several factors, including individuals leaving the state to work in other states or finding employment in jobs not covered by North Carolina's unemployment insurance. This is evidenced by the declining employment rate for CT program exiters, down 17% five years after exit for the 2014-2015 cohort. However, employment retention rate for the program completers remains at 77% after five years, a rate that is much higher than most other workforce programs. In addition, the median wages for CT program exiters reveal a stable increase over time, representing some of the highest wage outcomes among other workforce training programs. The elevated wages are likely due to the fact that eligible CT program participants were already employed during training.

The dominant industry of employment for CT program exiters reflects a heavy concentration on the high-paying Manufacturing industry, one of the eligible industry clusters for the CT program. Plastic Product, Motor Vehicle Parts, as well as Pharmaceutical and Medicine Manufacturing represented the top three Manufacturing subsectors employing CT program exiters. This demonstrates alignment of North Carolina's workforce and economic development efforts.

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» Overview of Apprenticeship Programs

ApprenticeshipNC (formerly known as NCWorks Apprenticeship) is a State Approving Agency for the US Department of Labor for workforce training program certification. The purpose of the Apprenticeship program is to provide individuals the opportunity to obtain occupational training and practical skills that will address the skills gap while providing an educational opportunity to attain a fundamental understanding of an occupation. ApprenticeshipNC assists North Carolina's employers in developing their own specialized, fully trained, and productive workforce to compete in a global economy.

The Fitzgerald Act of 1937 established a national apprenticeship program, and North Carolina's apprenticeship programs are authorized by and operate under the requirements and guidelines outlined under North Carolina General Statute Article 1 of Chapter 115D. In North Carolina, apprenticeship is a voluntary system of employer-driven employee training. Employers who agree to sponsor apprenticeship programs take on the responsibilities and obligations of the program. Employers who participate are required to have an approved plan that includes on-the-job training requirements, technical instruction requirements, defined training hours, and wage scale progression for participation to reward increased employee capability and skill. Wage rates for apprentices typically begin at about half the rate of experienced journey workers, then rise as the apprentice gains skills and competencies through the program. At the successful completion of on-the-job as well as instructional learning, apprentices receive an industry and federally recognized Journey-worker certificate that certifies occupational proficiency.

Apprenticeship programs typically take four years to complete and are established in almost 1,300 jobs and 700 employers in North Carolina. Apprenticeship programs are provided in a diverse set of industries and occupations, from advanced manufacturing to network maintenance to public administration.

On November 1, 2017, the Apprenticeship program was transferred from the North Carolina Department of Commerce to the North Carolina Community College System Office. As a result, the staff and resources of the Apprenticeship program and the advisory Apprenticeship Council were transitioned to the System Office.³¹ The NC Community College System now oversees the development and maintenance of Registered Apprenticeship programs throughout North Carolina under the guidance of the US Department of Labor. The Apprenticeship Council, an advisory group of professionals from across the state, provides guidance to the State Board of Community Colleges and helps formulate policy for the statewide Apprenticeship program.

» Apprenticeship Program Outcomes

As shown in Figure 57, participation in the ApprenticeshipNC program steadily increased throughout the study period. This recent growth was likely achieved in part by eliminating, in 2014-2015, the fee requirement for program participation in addition to efforts to expand outreach through regional partnerships with colleges, workforce boards, and employers.

³¹ See NC Session Law 2017-57, Senate Bill 257, Section 15.13. (a), <http://www.ncoah.com/rules/rrc/meetings/Agendas/August%202017/04%20NCAC%2022.pdf>

An important aspect of the apprenticeship program is that participation statistics can only be fully measured by a voluntarily shared SSN, thus numbers produced from the CFS may differ from those reported by the US Department of Labor.

Figure 57. Apprenticeship Program Participants and Exiters by Program Year

Participants who exited the apprenticeship program were defined as program exiters, and their subsequent wages and employment outcomes were tracked post exit.

Figure 58. Percentage of Apprenticeship Program Exiters Employed in North Carolina After Exit, by Year of Exit

One-year post-exit employment rates, shown in Figure 58 and Table 15, fluctuated between a low of 58% for exiters in the 2016-2017 program year to a high of 63% for exiters in the 2017-2018 program year. When the

exiting cohorts were followed over multiple years, the cohort employment rates generally showed slight declines (Figure 58). Of the 2014-2015 exiters, 62% were employed in the first year after exit while 56% were employed after year five.

As shown in Figure 59, one-year post-exit median wages remained fairly steady for the first four cohorts, ranging from \$40,453 for the 2018-2019 program year to \$44,240 for 2014-2015. With a single exception (a drop in wages for the 2015-2016 cohort 4 years post-exit), wages generally increased over time within each cohort. For the 2014-2015 cohort, post-exit wages increased by 21%, from \$44,240 one year after exit to \$53,724 five years after exit. This is well above \$29,465, the 2019 median annual wage in North Carolina for all wage earners covered by unemployment insurance³².

Figure 59. Median Wage of Apprenticeship Program Exiters in North Carolina, by Year of Exit

Analysis of industries of employment for program exiters shows that for all cohorts, Construction was the largest employer, followed by Manufacturing, Public Administration, Wholesale Trade Transport and Utilities, and Professional and Business Services. Figure 60 shows that one year after exit, 40% of the 2018-2019 cohort exiters were employed in Construction, followed by 23% in Manufacturing, 14% in Public Administration, 13% in Professional and Business Services, and 11% in Wholesale Trade Transport and Utilities.

³² Source of wage data: Common Follow-up System. For comparison, the 2019 median annual wage in North Carolina for all wage-earning residents was \$33,205 (American Community Survey).

Figure 60. 2018-2019 Apprenticeship Exiters One Year After Exit: Percentage Employed and Median Wage by Industry

Post-exit participation in public higher education (Table 15) for the completers of the Apprenticeship program was among the highest for exiters of any workforce program. One-year post exit enrollment in public higher education ranged from 21% for the 2014-2015 and 2015-2016 cohorts to 26% for the 2017-2018 cohort.

» Summary and Recommendations

Overall, outcome measures for Apprenticeship program exiters show increasing participation and fluctuations in both short- and long-term employment and wage outcomes.

As is common in most workforce and education programs, when exiters are followed over longer periods of time, the rate of employment in North Carolina tends to decline. This decline could be attributed to several factors including individuals not sustaining employment, moving out of state, or finding employment in jobs not covered by North Carolina's unemployment insurance laws. Median wages were some of the highest wage outcomes of any workforce development programs examined in this report. This is not unexpected, as participants are employed during program participation and thus have already built a relationship with an employer prior to program completion in addition to achieving skill gains through the training. It is worth mentioning that eliminating the fee requirement for program participation in 2014-2015 likely had a significant positive effect on program participation.

It is recommended that additional analyses of the Registered Apprenticeship program be undertaken to further the understanding of the specific jobs that lead to the greatest wage progressions and employment stability.

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

University of North Carolina System (UNC)

» Overview of Degree Programs

North Carolina's public university system offers an array of higher education programs through 16 campuses around the state.³³ Each year, over 60,000 degrees are awarded to students graduating from more than 200 academic degree programs offered by the UNC system.³⁴ Most UNC curriculum program participants are enrolled in academic degree programs; fewer are working toward other post-master's, post-baccalaureate, or post-secondary credentials. This evaluation report focuses on the outcomes of UNC's bachelor's, master's, and doctoral degree programs.

Bachelor's programs are typically completed within four years of matriculation by full-time students. While many bachelor's program enrollees begin their studies shortly after completing secondary education, other students are enrolled as sophomores or juniors after transferring from another institution of higher education or enter higher education later in the life course. Master's programs are typically completed in one to two years by full-time students, depending on the program. Most students enroll in master's programs after obtaining a bachelor's degree; however, some UNC campuses offer dual-degree programs that allow students to satisfy some master's degree requirements before obtaining their bachelor's.

Doctoral programs fall under two categories: research and professional practice. Research programs lead to the attainment of a Doctor of Philosophy (PhD) degree and prepare students to conduct academic research in their field of study. Professional practice programs lead to the attainment of a credential in fields such as law (JD) and medicine (MD) and prepare students for professional employment in their field, although individuals often need to satisfy additional requirements, such as passing an examination or completing an internship, to receive a license to practice.

» UNC Bachelor's Degree Program Outcomes

As shown in Figure 61, enrollment in bachelor's degree programs showed steady growth during the period studied, with the number of students increasing from 180,960 in the 2014-2015 program year to 190,245 in 2018-2019. Students who were recorded as having graduated from a bachelor's program were defined as program completers/graduates, and their subsequent wages and employment outcomes were tracked post completion. The number of bachelor's program completers also trended upward during this period.

Figures 62 and 63 show employment and wage outcomes at one through five years after graduation, for all graduating cohorts from 2014-2015 to 2018-2019. The rate of employment in North Carolina one year after graduation remained stable across cohorts, ranging from 76% to 77%. The rate at which bachelor's graduates subsequently enrolled in public education, employment, or training programs was also stable, at 17% for all cohorts one year after graduation (Table 16). Wage earnings one year following graduation increased across

³³ UNC also operates the NC School of Science of Mathematics, a residential high school, and offers a high school program through the UNC School of the Arts. Neither the School of Science and Math nor the high school portion of the School of Arts are included in this report.

³⁴ The University of North Carolina System website, <https://www.northcarolina.edu/>

cohorts, with median wage earnings increasing from \$22,038 for the cohort graduating in 2014-2015 to \$25,708 for the 2018-2019 cohort.

Figure 61. UNC Bachelor’s Degree Program Participants and Completers by Program Year

Figure 62. Percentage of UNC Bachelor’s Program Completers Employed in North Carolina After Degree Conferral, by Year of Graduation

Bachelor’s recipients saw their wages increase in each year after graduation, while the share employed in North Carolina declined; for instance, the median wages for 2014-2015 graduates rose from \$22,038 after one year to \$44,251 after five and their employment rate declined from 76% to 64.

Figure 63. Median Wage of UNC Bachelor's Program Completers in North Carolina, by Year of Graduation

Bachelor's graduates saw high rates of employment in the low-paying Retail Trade (\$4,868) and Leisure and Hospitality (\$4,265) industries in their first year after graduation, as well as in industries paying relatively higher wages such as Professional and Business Services (\$15,461), Educational Services (\$15,863), and Health Care and Social Assistance (\$24,985) (Figure 64).

Figure 64. 2018-2019 UNC Bachelor's Program Completers: One-Year Post Outcomes by Industry

Wage and employment outcomes also varied widely by program of study. After one year, 2018-2019 graduates saw median wages ranging from \$12,761 for area, ethnic, cultural, gender and group studies majors to \$49,874 for engineering majors (see Appendix Table 16). For longer term wage outcomes, five-year post-graduation median earnings for the 2014-2015 graduating class ranged from \$31,053 for visual and performing arts majors to \$79,152 for Computer and Information Services and Support Services majors (see Appendix Table 13).

Overall, graduates of UNC's bachelor's programs showed steady rates of employment and positive wage growth over time. However, wages varied considerably by major and industry.

» UNC Master's Degree Program Outcomes

As shown in Figure 65, after a slight drop from the 2014-2015 program year, enrollment in UNC master's programs showed an increase in enrollment and graduation between the 2015-2016 and 2018-2019 program years. Students who were recorded as having graduated from a master's program were defined as program completers/graduates, and their subsequent wages and employment outcomes were tracked post completion.

Figure 65. UNC Master's Degree Program Participants and Completers by Program Year

Figure 66. UNC Master's Graduates Employed in North Carolina After Degree Conferral, by Year of Graduation

Post-master's employment in North Carolina at one year following completion remained stable across the cohorts examined, with only small fluctuations (72%-73%). However, these employment rates declined within a cohort for each year after graduation (Figure 66), a common pattern across most workforce training and

education programs. Post-graduation enrollment in higher education stayed stable across cohorts at 9%-10% one year after degree completion and declined slightly over time within each cohort (Table 17).

Median wages following degree conferral show only small cohort differences (Figure 67 and Table 17). One-year post-graduation wages increased slightly overall from the 2014-2015 to 2018-2019 graduates. These one-year post-exit median wages ranging from \$42,696 (2014-2015 graduates) to \$46,195 (2018-2019 graduates). For all cohorts, wages increased steadily over time.

Figure 67. Median Wage of UNC Master’s Program Completers in North Carolina, by Year of Graduation

Recent master’s recipients (2018-2019 cohort) were most likely to be employed in Educational Services (37%), followed by Health Care and Social Assistance (29%), and Professional and Business Services (19%) (Figure 68). Overall, UNC master’s graduates showed wage growth over time, but wages varied considerably by industry, with graduates employed in manufacturing earning the most (\$70,447) placing them far above the second highest paying industry financial activities (\$56,556).

» UNC Doctoral (Research) Degree Program Outcomes

As shown in Figure 69, enrollment in research-focused doctoral programs declined over time, from 8,630 in the 2014-2015 program year to 7,358 in 2018-2019.

Figure 69. UNC Doctoral (Research) Degree Program Participants and Completers by Program Year

Students who were recorded as having graduated from a doctoral research program were defined as program completers/graduates, and their subsequent wages and employment outcomes were tracked post completion. As measured by one-year post-graduation outcomes, employment rates of research doctorate recipients in North Carolina generally increased across the cohorts from 53% to 58% with only a 1% decrease in 2018-2019 to 57% (Figure 70). These rates are low compared to graduates from bachelor's and master's programs, which may be due to the unique employment circumstances of doctoral recipients.

Many short-term academic jobs are not covered by unemployment insurance, which would exclude them from the statistics presented. Additionally, many research doctorate recipients leave the state for academic employment, as academic hiring guidelines typically require universities to conduct a national search. Even for institutions with no such requirement, doctoral research degrees focus on extremely narrow areas, and any such focused area is likely to have very, if any, job openings in a particular region. Thus, students trained by UNC institutions may leave the state for jobs in their focus area, while the same trend is likely to work in reverse where students trained at out of state universities come to North Carolina for jobs in their focus area. The second year after graduation shows a noticeable drop in employment within North Carolina, followed by much smaller declines in subsequent years. This unique employment outcome may be due to recipients of doctoral degrees finding out-of-state employment following a transitional post-graduate year (another phenomenon common among doctoral students/graduates).

Figure 70. Percentage of UNC Doctoral (Research) Program Completers Employed in North Carolina After Degree Conferal, by Year of Graduation

Short-term wage outcomes one year after show an increase across the first four cohorts of research doctorates, then a decline for the 2018-2019 graduating class (Figure 71). Within each cohort, wages increase considerably over time. The vast majority of those completing doctoral research programs were employed in Educational Services (75%) followed distantly by Professional and Business Services (14%) and Health Care and Social Assistance (13%) (Table 18).

Figure 71. Median Wage of UNC Doctoral (Research) Program Completers in North Carolina, by Year of Graduation

Figure 72. 2018-2019 UNC Doctoral (Research) Program Completers One Year After Graduation: Percentage Employed and Median Wage by Industry

Overall, UNC’s doctoral research programs saw wage increases over time across graduating cohorts, as well as larger median wage growth within each graduating cohort.

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» UNC Doctoral (Professional Practice) Degree Program Outcomes

As shown in Figure 73, enrollment in professional doctoral programs in the UNC system increased slightly between the 2014-2015 and 2018-2019 program years (also see Table 19). Numbers of graduates also increased somewhat during this time period.

Figure 73. UNC Doctoral (Professional Practice) Degree Program Participants and Completers by Program Year

Figure 74. Percentage of UNC Doctoral (Professional Practice) Program Completers Employed in North Carolina After Degree Conferral, by Year of Graduation

Students who were recorded as having graduated from a doctoral program were defined as program completers/graduates, and their subsequent wages and employment outcomes were tracked post completion. Employment rates for professional doctoral graduates are somewhat low compared to other programs below the doctoral level, which may be due in part to graduates of professional practice doctoral programs finding

employment out of state (Figure 74), joining a partnership (or becoming self-employed), making them ineligible for UI benefits. Employment rates and median wages for professional doctoral graduates within North Carolina show an increase across cohorts and show high wage growth within cohorts (Figure 75).

Figure 75. Median Wage of UNC Professional Doctorate Program Completers in North Carolina, by Year of Graduation

Recent graduates of doctoral practice programs were most likely to be employed within the Health Care and Social Assistance (59%) and Professional and Business Services industries (29%), fields that include medical doctors and attorneys-at-law (Figure 76). Overall, UNC’s professional practice doctoral graduates show steady employment and positive wage outcomes.

Figure 76. 2018-2019 UNC Doctoral (Professional Practice) Program Completers One Year After Graduation: Percentage Employed and Median Wage by Industry

* Employment percentages by industry total more than 100% due to individuals who were employed, and receiving wages, in more than one industry. See methodology for more information.

» Summary and Recommendations

The outcomes of UNC graduates were generally positive and improved over time. Bachelor's, master's, and doctoral degree recipients have seen their wages increase in each year after graduation, and each cohort tended to earn more in each year than the prior cohort, except for the most recent cohort of graduates with research doctorates. Higher-level credentials were associated with better wage outcomes: master's degree recipients earned more than bachelor's degree recipients, and doctoral degree recipients earned more than master's degree recipients, in each year after graduation across all the cohorts examined here.

The share of graduates employed in North Carolina typically declined in each year after graduation, but this wasn't necessarily a negative outcome. Individuals not employed in North Carolina might be unemployed but could also be out of the labor force (e.g. full-time parents); employed in a role, including self-employment or partnership; not covered by North Carolina's unemployment insurance laws; or employed in another state.

The wide variation in outcomes between different areas of study and different degree levels may suggest that some programs lead to better labor market outcomes than others. However, more research is needed to determine whether the degree programs themselves caused these outcomes, or if other factors were at play (such as differences in the types of students graduating from these programs). Even if some programs lead to higher wages after graduation, the highest earning programs are likely to shift over time as North Carolina's economy changes over time. Furthermore, at higher degree levels the population of graduates shrinks substantially, making such fine-grained interpretation comparisons unreliable because in such a small population a difference of a few persons could cause large shifts in the population measures. Any such interpretation, especially for smaller programs, requires a deeper analysis, such as combining multiple graduation cohorts and statistical techniques suitable for smaller populations. Information about the causal returns to degree programs and/or the variation in these returns could then be used to determine which programs provide the best return on investment for UNC students and to strengthen existing program offerings.
