Re: State Crime Lab DNA report

Dear Chairs of the Joint Legislative Oversight Committee on Justice and Public Safety,

Pursuant to N.C. Gen. Stat. § 15A-266.5(c), please find the attached report from the North Carolina Department of Justice on the NC Crime State Crime Laboratory's FY2018-19 operations and required statistics relating to the DNA Database and DNA databank.

Thank you for the opportunity to provide this information. We would be happy to respond to any questions you may have regarding this report.

Very truly yours,

Vanessa Martinucci
Director
State Crime Lab

cc: William Childs, NCGA Fiscal Research Division

Seth Dearmin, DOJ Chief of Staff

Traditional detective work will always be integral to law enforcement, but investigators increasingly rely on science and technology to solve crimes. DNA is one of the most important crime-fighting tools of modern times because it can pinpoint suspects, convict the guilty, exonerate the innocent, and bring closure to victims and their families.

DNA, or deoxyribonucleic acid, is a unique genetic fingerprint found in cells of the human body. Just a tiny trace of the criminal's saliva or blood left behind can yield a DNA profile, which then can be compared to DNA samples from known criminals, arrestees or evidence from other crimes for a match.

DNA technology is perhaps most promising when used to solve crimes without an apparent suspect, such as a rape case where the victim cannot identify the attacker. Evidence collected can include a DNA sample left behind by the attacker, which can then be compared to millions of DNA profiles included in the state and national DNA database, called the CODIS system. If the comparison yields a match to an offender, the rapist can be identified and brought to justice.

The North Carolina State Crime Laboratory (NCSCL) uses DNA technology to help law enforcement solve crimes and bring justice to victims. The Lab's DNA Database unit screens, processes, and analyzes DNA samples from arrestees and convicted offenders and adds those DNA profiles to the database. In cases without a known suspect, a Lab analyst can compare a DNA profile developed from crime scene evidence to more than 360,000 DNA profiles in the Crime Lab's database to look for a match or hit to identify the suspect.

Once a hit is made, the NCSCL confirms it by re-analyzing the original DNA sample taken from the convicted offender or arrestee. The Lab also compares the thumbprint taken at the time the DNA sample was collected to the convicted offender's or arrestee's fingerprints on file to confirm that the identity of the person who provided the DNA sample. After this confirmation is complete, a search warrant is written and served on the convicted offender or arrestee to obtain another sample of DNA. This sample is analyzed to definitively confirm that the DNA matches.

Expanding North Carolina's DNA database—to include all convicted felons in 2003, certain arrestees in 2011, and additional arrestees in 2015—is succeeding with more hits to help solve crimes and aid investigations. To date, the NCSCL has achieved more than 5,495 hits to the DNA database, including a record number of hits in Fiscal Year 2018-2019.

During FY 2018-2019, the North Carolina State Crime Lab:

- **Achieved 799 hits to the DNA database**, the highest number ever recorded in a single year. A hit is a match between a DNA profile in the database and DNA recovered from a crime scene. Since criminals, and especially rapists, often repeat their crimes, a database hit can crack a cold case.
- **Grew the state's DNA database to contain more than 360,000 DNA profiles** thanks to diligent work by the NCSCL and local and state law enforcement agencies. The more profiles the database contains, the more hits it is likely to yield to identify suspects, eliminate suspects and solve crimes. Data included in North Carolina's DNA database is included in the Federal Bureau of Investigations' national CODIS (Combined DNA Index System) database.
- **Partnered with the State of North Carolina's Government Data Analytics Center (GDAC)** to integrate the DNA Database Section's specimen management software with the Criminal Justice Law Enforcement Automated Data Services (CJLEADS) database. This sharing of data will enable law enforcement personnel to search CJLEADS to determine if an individual already has a DNA Database sample on file in CODIS, or if a sample is needed. The goal of this project is to reduce the number of duplicate samples submitted to the NCSCL, thus saving money and time for the laboratory and law enforcement personnel. Partnering with GDAC will also help ensure more samples are collected from individuals that are to be included in the DNA Database.

Summary of the Operations of the DNA Database Section for FY 2018-2019

CODIS Hits for FY 2018-2019: 799

- 578 hits to Convicted Offender DNA profiles
- 176 hits to Arrestees DNA profiles
- 45 hits to Forensic Samples, DNA profiles uploaded as a result of crime scene evidence analyzed by the NCSCL.
- We do not have the software ability to confirm whether a CODIS hit resulted in an arrest or a conviction after law enforcement is notified. Therefore, we are unable to provide that information as requested under §15A-266.5(c). However, we hope our partnership with GDAC will give us the ability to provide that information in future reports.

Forensic Samples Uploaded: 1,394

Convicted Offenders Uploaded: 8,731

Arrestee Samples Uploaded: 7,348

**Since February 1, 2011, more than 90,000 arrestee samples received*

Trends from FY 11-12 through FY 18-19

	FY18-19	FY17-18	FY16-17	FY15-16	FY14-15	FY13-14	FY12-13	FY11-12
Total CODIS hits:	799	591	478	456	356	266	248	263
Hits to arrestee DNA	176	125	102	96	40	41	19	34
Hits to Convicted Offender DNA	578	446	355	345	285	218	220	229
Hits to crime scene DNA	45	20	21	15	31	7	9	0
Forensic Samples Uploaded	1,394	1,177	1,350	1,245	878	523	532	683
Arrestee Samples Uploaded	7,348	7,906	9,212	8,047	7,210	9,419	3,325	5,170
Convicted Offender Samples Uploaded	8,731	9,933	10,165	13,103	10,366	14,471	*19,183	7,202

CODIS=Combined DNA Index System, a nationwide DNA database;

**Numbers uploaded for FY2012-2013 were significantly higher due to the elimination of samples pending in that calendar year. In subsequent years, samples have been worked in the year in which they were submitted.*

FY 2018-2019 DNA Database Expenses (Convicted Offender and Arrestee Samples)

Staff Costs to Process DNA CODIS Samples	\$ 1,430,005
Outsourced Laboratory expenses to process DNA CODIS Samples	\$ 0
Other operating expenses (e.g. supplies)	\$ 802,854
Total FY2018-2019 DNA Database Expenses	\$ 2,232,859

Expunction of Arrestee DNA records

DNA records from arrestees expunged in FY 2018-2019:	2,176
DNA expungements requested in FY 2018-2019:	3,377

An important workload and associated programmatic costs of the DNA Database Section is the expungement or removal of arrestee samples upon request. Of the 3,377 expungements processed through completion in FY 2018-2019, 2,176 requests were approved and 1,201 were denied. As in prior years, the Database Section placed a number of requests on hold for final processing because no sample had been received for the specific arrest from the appropriate law enforcement unit.

Expungement Procedure

As directed the State Crime Lab continues to follow its FBI-approved expungement procedure to remove qualifying arrestee DNA profiles from the database upon receipt of the Administrative Office of the Court (AOC) verification form as directed by G.S. 15A-266.3A. If the arrestee qualifies for expungement, the DNA samples are removed from the DNA database and destroyed. Also, the DNA record is removed from the DNA database and CODIS. Each person who submits a request for expungement is notified by letter whether or not his/her sample qualified for expungement. For FY 2018-2019, 3,377 letters were sent. The expungement process is completed within 90 days.

Arrestee/Convicted Offender Collection Kits

The Laboratory continues to provide the standardized Arrestee/Offender DNA collection kit; however, the kits are now ordered by law enforcement agencies directly through the State's vendor. Kits continue to be provided to law enforcement at no cost to the agencies. The kits will continue to be used specifically to collect DNA from certain convicted offenders and arrestees.

The Laboratory additionally purchases 8,000 kits biennially for the Department of Public Safety to facilitate standardized DNA collection in all state correction facilities.

Numerous DNA samples were rejected in FY 2018-2019 because they did not meet the statutory standards for collection pursuant to N.C.G.S. 15A-266.3A, or there were issues with the sample itself. In FY 2018-2019 there were approximately 785 samples rejected. The DNA Database Section continues to receive many duplicate samples for convicted offenders and arrestees whose samples are already present in the CODIS database.

In FY 2018-2019 approximately 5,000 samples received were duplicates. Over-submission of kits continues to impact the DNA Database Section. For FY 2018-2019 duplicate submissions cost the NCSCL over \$30,000. The Laboratory pays for the collection kits, which are provided to law enforcement agencies at no cost. To maximize taxpayer resources, the Lab encourages ongoing training in efficient collection procedures for submitting law enforcement agencies. All personnel involved in DNA sample collection are encouraged to verify the need of a new sample prior to collection and submission to the NCSCL.

Cutting Edge Technology and Equipment

New technology recently implemented at the NCSCL means arrestee and convicted offender DNA profiles are analyzed and uploaded to the database more rapidly and with more data. In 2019 the NCSCL completed a validation of a new chemistry kit using Y-STRs, or the male portion of DNA. This additional testing method can aid in the identification of suspects in unsolved cases. The NCSCL is also currently validating upgraded software for DNA analysis that will be used to process arrestee and convicted offender DNA samples.

ISO 17025

The Database Section received full accreditation under ISO 17025 in 2018. The ISO/IEC 17025 procedures are the highest international standards and protocols applicable to forensic science laboratories.

ATTACHMENT I

DNA Collection Upon Arrest: How it works

DNA collection upon arrest saves lives, prevents violent crime by repeat offenders, saves investigative resources, improves ID procedures, reduces misidentification, reduces convictions based on false confessions, and clears cold cases.

How it works in North Carolina:

- During certain felony arrests, law enforcement takes a DNA sample by cheek swab using a kit provided by the NC State Crime Laboratory (NCSCL)
- The cheek swab goes to the NCSCL, which logs the sample, verifies the eligibility of the sample, and then analyzes it to provide a DNA profile for upload to the database.
- That analysis is 100% quality assurance reviewed by a qualified NCSCL forensic analyst prior to entry into the DNA database as per federal requirements.
- The DNA profile is uploaded to state and national databases to search for matches to solve cold cases.

NC State Crime Lab responsibilities:

Crime Lab scientists analyze crime scene evidence that may contain DNA. DNA profiles obtained from crime scene evidence are then run against the database of convicted offenders and arrestees to try to identify the perpetrator.

NCSCL staff receive each arrestee DNA sample, enter the sample data, verify the sample was taken from a suspect accused of a qualifying offense, analyze the sample, and upload it to the database of convicted offender and arrestee DNA.

When a search of the database yields a hit or matches between crime scene DNA and the DNA database, the NCSCL works with local law enforcement agencies to identify the suspect. Fingerprint collection is required in the DNA collection kit to help confirm identity.

If a person is permitted by court officials to expunge their DNA profile from the database (due to dismissal or acquittal or other qualifying event), the NCSCL removes it.

Confirming a hit to the database: How it works:

The CODIS State Administrator at NCSCL notifies the NCSCL Database Manager of a hit. The NCSCL Database Manager then starts the offender/arrestee confirmation process:

- Subject Information Assessment-- NCSCL verifies that the DNA profile is in the database due to a qualifying offense and that the offender/arrestee was not incarcerated at the time the offense under investigation was committed.
- Fingerprint verification — NCSCL analysts verify that the fingerprints submitted with the offender/arrestee DNA sample match those on file for the individual.
- Confirmation of offender/arrestee sample — DNA Database Analyst pulls the original offender/arrestee DNA sample and re-analyzes the sample to ensure that the profile matches what was uploaded to the database.

Once the confirmation process is completed, the Database Analyst notifies the NCSCL CODIS State Administrator. The CODIS Administrator then notifies the investigating law enforcement agency of the offender/arrestee's identity. This gives investigators probable cause to obtain a DNA standard from the individual to confirm the hit.

The investigating agency obtains a search warrant, often with SBI/NCSCL assistance, and obtains a DNA standard from the suspect which is then submitted to the NCSCL case analyst.

The NCSCL case analyst generates the profile for the DNA standard and compares this to the original crime scene evidence that was uploaded to CODIS. A case report is generated to confirm the match.
