

Chairman Lewis Motion, Redistricting Committee, 9/11/2019

- Central staff is directed to identify the top 5 unique maps from Set 1 from each county grouping using Dr. Chen's composite scores which were provided to the committee.
- If there are fewer than five unique maps in a grouping, central staff will inform the committee of this and all of the unique maps will be used for that grouping.
- Central staff is then directed to reach out to the Lottery Commission to obtain a method of random selection, ideally a machine.
- The committee will meet after the maps are identified and a random selection will be held, which will then be used to create the base map.
- The committee intends to discuss an amendment process further after the base has been created.
