

**§ 62-133.8. Clean Energy and Energy Efficiency Portfolio Standard (CEPS).**

- (a) Definitions. – As used in this section:
- (1) "Clean energy facility" means a renewable energy facility, a nuclear energy facility, including an uprate to a nuclear energy facility, or a fusion energy facility.
    - (1a) "Clean energy resource" means renewable energy resources, nuclear energy resources, including an uprate to a nuclear energy facility, and fusion energy.
    - (1b) "Combined heat and power system" means a system that uses waste heat to produce electricity or useful, measurable thermal or mechanical energy at a retail electric customer's facility.
  - (2) "Demand-side management" means activities, programs, or initiatives undertaken by an electric power supplier or its customers to shift the timing of electricity use from peak to nonpeak demand periods. "Demand-side management" includes, but is not limited to, load management, electric system equipment and operating controls, direct load control, and interruptible load.
  - (3) "Electric power supplier" means a public utility, an electric membership corporation, or a municipality that sells electric power to retail electric power customers in the State.
    - (3a) "Electricity demand reduction" means a measurable reduction in the electricity demand of a retail electric customer that is voluntary, under the real-time control of both the electric power supplier and the retail electric customer, and measured in real time, using two-way communications devices that communicate on the basis of standards.
  - (4) "Energy efficiency measure" means an equipment, physical, or program change implemented after January 1, 2007, that results in less energy used to perform the same function. "Energy efficiency measure" includes, but is not limited to, energy produced from a combined heat and power system that uses non-clean energy resources. "Energy efficiency measure" does not include demand-side management.
    - (4a) "Fusion" means a reaction in which at least one heavier, more stable nucleus is produced from two lighter, less stable nuclei, typically through high temperatures and pressures, emitting energy as a result.
    - (4b) "Fusion energy" means the product of fusion reactions inside a fusion device, used for the purpose of generating electricity or other commercially usable forms of energy.
    - (4c) "New clean energy facility" means:
      - a. A new renewable energy facility; or
      - b. Facilities placed into service on or after January 1, 2007, which are either (i) a nuclear energy facility, including an uprate to a nuclear energy facility, or (ii) a fusion energy facility.
  - (5) "New renewable energy facility" means a renewable energy facility that either:
    - a. Was placed into service on or after January 1, 2007.
    - b. Delivers or has delivered electric power to an electric power supplier pursuant to a contract with NC GreenPower Corporation that was entered into prior to January 1, 2007.
    - c. Is a hydroelectric power facility with a generation capacity of 10 megawatts or less that delivers electric power to an electric power supplier.

- (6) "Renewable energy certificate" means a tradable instrument that is equal to one megawatt hour of electricity or equivalent energy supplied by a clean energy facility, new clean energy facility, or reduced by implementation of an energy efficiency measure that is used to track and verify compliance with the requirements of this section as determined by the Commission. A "renewable energy certificate" does not include the related emission reductions, including, but not limited to, reductions of sulfur dioxide, oxides of nitrogen, mercury, or carbon dioxide.
- (7) "Renewable energy facility" means a facility, other than a hydroelectric power facility with a generation capacity of more than 10 megawatts, that either:
  - a. Generates electric power by the use of a renewable energy resource.
  - b. Generates useful, measurable combined heat and power derived from a renewable energy resource.
  - c. Is a solar thermal energy facility.
- (8) "Renewable energy resource" means a solar electric, solar thermal, wind, hydropower, geothermal, or ocean current or wave energy resource; a biomass resource, including agricultural waste, animal waste, wood waste, spent pulping liquors, combustible residues, combustible liquids, combustible gases, energy crops, or landfill methane; waste heat derived from a renewable energy resource and used to produce electricity or useful, measurable thermal energy at a retail electric customer's facility; or hydrogen derived from a renewable energy resource. "Renewable energy resource" does not include peat, a fossil fuel, or nuclear energy resource.
- (b) Clean Energy and Energy Efficiency Standards (CEPS) for Electric Public Utilities. –
  - (1) Each electric public utility in the State shall be subject to a Clean Energy and Energy Efficiency Portfolio Standard (CEPS) according to the following schedule:

<b>Calendar Year</b>	<b>CEPS Requirement</b>
2012	3% of 2011 North Carolina retail sales
2015	6% of 2014 North Carolina retail sales
2018	10% of 2017 North Carolina retail sales
2021 and thereafter	12.5% of 2020 North Carolina retail sales

- (2) An electric public utility may meet the requirements of this section by any one or more of the following:
  - a. Generate electric power at a new clean energy facility.
  - b. Use a clean energy resource to generate electric power at a generating facility other than the generation of electric power from waste heat derived from the combustion of fossil fuel.
  - c. Reduce energy consumption through the implementation of an energy efficiency measure; provided, however, an electric public utility subject to the provisions of this subsection may meet up to twenty-five percent (25%) of the requirements of this section through savings due to implementation of energy efficiency measures. Beginning in calendar year 2021 and each year thereafter, an electric public utility may meet up to forty percent (40%) of the requirements of this section through savings due to implementation of energy efficiency measures.
  - d. Purchase electric power from a new clean energy facility. Electric power purchased from a new clean energy facility located outside the geographic boundaries of the State shall meet the requirements of this section if the electric power is delivered to a public utility that provides

electric power to retail electric customers in the State; provided, however, the electric public utility shall not sell the renewable energy certificates created pursuant to this paragraph to another electric public utility.

- e. Purchase renewable energy certificates derived from in-State or out-of-state new clean energy facilities. Certificates derived from out-of-state new clean energy facilities shall not be used to meet more than twenty-five percent (25%) of the requirements of this section, provided that this limitation shall not apply to an electric public utility with less than 150,000 North Carolina retail jurisdictional customers as of December 31, 2006.
- f. Use electric power that is supplied by a new clean energy facility or saved due to the implementation of an energy efficiency measure that exceeds the requirements of this section for any calendar year as a credit towards the requirements of this section in the following calendar year or sell the associated renewable energy certificates.
- g. Electricity demand reduction.

(c) Clean Energy and Energy Efficiency Standards (CEPS) for Electric Membership Corporations and Municipalities. –

- (1) Each electric membership corporation or municipality that sells electric power to retail electric power customers in the State shall be subject to a Clean Energy and Energy Efficiency Portfolio Standard (CEPS) according to the following schedule:

<b>Calendar Year</b>	<b>CEPS Requirement</b>
2012	3% of 2011 North Carolina retail sales
2015	6% of 2014 North Carolina retail sales
2018 and thereafter	10% of 2017 North Carolina retail sales

- (2) An electric membership corporation or municipality may meet the requirements of this section by any one or more of the following:
  - a. Generate electric power at a new clean energy facility.
  - b. Reduce energy consumption through the implementation of demand-side management or energy efficiency measures.
  - c. Purchase electric power from a clean energy facility or a hydroelectric power facility, provided that no more than thirty percent (30%) of the requirements of this section may be met with hydroelectric power, including allocations made by the Southeastern Power Administration.
  - d. Purchase renewable energy certificates derived from in-State or out-of-state clean energy facilities. An electric power supplier subject to the requirements of this subsection may use certificates derived from out-of-state clean energy facilities to meet no more than twenty-five percent (25%) of the requirements of this section.
  - e. Acquire all or part of its electric power through a wholesale purchase power agreement with a wholesale supplier of electric power whose portfolio of supply and demand options meets the requirements of this section.
  - f. Use electric power that is supplied by a new clean energy facility or saved due to the implementation of demand-side management or energy efficiency measures that exceeds the requirements of this section for any calendar year as a credit towards the requirements of

this section in the following calendar year or sell the associated renewable energy certificates.

g. Electricity demand reduction.

(d) Compliance With CEPS Requirement Through Use of Solar Energy Resources. – For calendar year 2018 and for each calendar year thereafter, at least two-tenths of one percent (0.2%) of the total electric power in kilowatt hours sold to retail electric customers in the State, or an equivalent amount of energy, shall be supplied by a combination of new solar electric facilities and new metered solar thermal energy facilities that use one or more of the following applications: solar hot water, solar absorption cooling, solar dehumidification, solar thermally driven refrigeration, and solar industrial process heat. The terms of any contract entered into between an electric power supplier and a new solar electric facility or new metered solar thermal energy facility shall be of sufficient length to stimulate development of solar energy; provided, the Commission shall develop a procedure to determine if an electric power supplier is in compliance with the provisions of this subsection if a new solar electric facility or a new metered solar thermal energy facility fails to meet the terms of its contract with the electric power supplier. As used in this subsection, "new" means a facility that was first placed into service on or after January 1, 2007. The electric power suppliers shall comply with the requirements of this subsection according to the following schedule:

<b>Calendar Year</b>	<b>Requirement for Solar Energy</b>
<b>Resources</b>	
2010	0.02%
2012	0.07%
2015	0.14%
2018	0.20%

(e) Compliance With CEPS Requirement Through Use of Swine Waste Resources. – For calendar year 2018 and for each calendar year thereafter, at least two-tenths of one percent (0.2%) of the total electric power in kilowatt hours sold to retail electric customers in the State shall be supplied, or contracted for supply in each year, by swine waste. The electric power suppliers, in the aggregate, shall comply with the requirements of this subsection according to the following schedule:

<b>Calendar Year</b>	<b>Requirement for Swine Waste</b>
<b>Resources</b>	
2012	0.07%
2015	0.14%
2018	0.20%

(f) Compliance With CEPS Requirement Through Use of Poultry Waste Resources. – For calendar year 2014 and for each calendar year thereafter, at least 900,000 megawatt hours of the total electric power sold to retail electric customers in the State or an equivalent amount of energy shall be supplied, or contracted for supply in each year, by poultry waste combined with wood shavings, straw, rice hulls, or other bedding material. The electric power suppliers, in the aggregate, shall comply with the requirements of this subsection according to the following schedule:

<b>Calendar Year</b>	<b>Requirement for Poultry Waste</b>
<b>Resources</b>	
2012	170,000 megawatt hours
2013	700,000 megawatt hours
2014	900,000 megawatt hours

(g) Control of Emissions. – As used in this subsection, Best Available Control Technology (BACT) means an emissions limitation based on the maximum degree a reduction in the emission of air pollutants that is achievable for a facility, taking into account energy,

environmental, and economic impacts and other costs. A biomass combustion process at any new clean energy facility that delivers electric power to an electric power supplier shall meet BACT. The Environmental Management Commission shall determine on a case-by-case basis the BACT for a facility that would not otherwise be required to comply with BACT pursuant to the Prevention of Significant Deterioration (PSD) emissions program. The Environmental Management Commission may adopt rules to implement this subsection. In adopting rules, the Environmental Management Commission shall take into account cumulative and secondary impacts associated with the concentration of biomass facilities in close proximity to one another. In adopting rules the Environmental Management Commission shall provide for the manner in which a facility that would not otherwise be required to comply with BACT pursuant to the PSD emissions programs shall meet the BACT requirement. This subsection shall not apply to a facility that qualifies as a new clean energy facility under sub-subdivision b. of subdivision (5) of subsection (a) of this section.

(h) Cost Recovery and Customer Charges. –

- (1) For the purposes of this subsection, the term "incremental costs" means all reasonable and prudent costs incurred by an electric power supplier to:
  - a. Comply with the requirements of subsections (b), (c), (d), (e), and (f) of this section that are in excess of the electric power supplier's avoided costs other than those costs recovered pursuant to G.S. 62-133.9.
  - b. Fund research that encourages the development of renewable energy, energy efficiency, or improved air quality, provided those costs do not exceed one million dollars (\$1,000,000) per year.
  - c. Comply with any federal mandate that is similar to the requirements of subsections (b), (c), (d), (e), and (f) of this section that exceed the costs that the electric power supplier would have incurred under those subsections in the absence of the federal mandate.
  - d. Provide incentives to customers, including program costs, incurred pursuant to G.S. 62-155(f).
- (2) All reasonable and prudent costs incurred by an electric power supplier to comply with any federal mandate that is similar to the requirements of subsections (b), (c), (d), (e), and (f) of this section, including, but not limited to, the avoided costs associated with a federal mandate that exceeds the avoided costs that the electric power supplier would have incurred pursuant to subsections (b), (c), (d), (e), and (f) of this section in the absence of the federal mandate, shall be recovered by the electric power supplier in an annual rider charge assessed in accordance with the schedule set out in subdivision (4) of this subsection increased by the Commission on a pro rata basis to allow for full and complete recovery of all reasonable and prudent costs incurred to comply with the federal mandate.
- (3) Except as provided in subdivision (2) of this subsection, the total annual incremental cost to be incurred by an electric power supplier and recovered from the electric power supplier's retail customers shall not exceed an amount equal to the per-account annual charges set out in subdivision (4) of this subsection applied to the electric power supplier's total number of customer accounts determined as of December 31 of the previous calendar year. An electric power supplier shall be conclusively deemed to be in compliance with the requirements of subsections (b), (c), (d), (e), and (f) of this section if the electric power supplier's total annual incremental costs incurred equals an amount equal to the per-account annual charges set out in subdivision (4) of

this subsection applied to the electric power supplier's total number of customer accounts determined as of December 31 of the previous calendar year. The total annual incremental cost recoverable by an electric power supplier from an individual customer shall not exceed the per-account charges set out in subdivision (4) of this subsection except as these charges may be adjusted in subdivision (2) of this subsection.

- (4) An electric power supplier shall be allowed to recover the incremental costs incurred to comply with the requirements of subsections (b), (c), (d), (e), and (f) of this section and fund research as provided in subdivision (1) of this subsection through an annual rider not to exceed the following per-account annual charges:

<b>Customer Class</b>	<b>2008-2011</b>	<b>2012-2014</b>	<b>2015 and thereafter</b>
Residential per account	\$10.00	\$12.00	\$27.00
Commercial per account	\$50.00	\$150.00	\$150.00
Industrial per account	\$500.00	\$1,000.00	\$1,000.00

- (5) The Commission shall adopt rules to establish a procedure for the annual assessment of the per-account charges set out in this subsection to an electric public utility's customers to allow for timely recovery of all reasonable and prudent costs of compliance with the requirements of subsections (b), (c), (d), (e), and (f) of this section and to fund research as provided in subdivision (1) of this subsection. The Commission shall ensure that the costs to be recovered from individual customers on a per-account basis pursuant to subdivisions (2) and (3) of this subsection are in the same proportion as the per-account annual charges for each customer class set out in subdivision (4) of this subsection.

(i) Adoption of Rules. – The Commission shall adopt rules to implement the provisions of this section. In developing rules, the Commission shall:

- (1) Provide for the monitoring of compliance with and enforcement of the requirements of this section.
- (2) Include a procedure to modify or delay the provisions of subsections (b), (c), (d), (e), and (f) of this section in whole or in part if the Commission determines that it is in the public interest to do so. The procedure adopted pursuant to this subdivision shall include a requirement that the electric power supplier demonstrate that it made a reasonable effort to meet the requirements set out in this section.
- (3) Ensure that energy credited toward compliance with the provisions of this section not be credited toward any other purpose, including another clean energy portfolio standard or voluntary clean energy purchase program in this State or any other state.
- (4) Establish standards for interconnection of clean energy facilities and other nonutility-owned generation with a generation capacity of 10 megawatts or less to an electric public utility's distribution system; provided, however, that the Commission shall adopt, if appropriate, federal interconnection standards. The standards adopted pursuant to this subdivision shall include an expedited review process for swine and poultry waste to energy projects of two megawatts (MW) or less and other measures necessary and appropriate to achieve the objectives of subsections (e) and (f) of this section.
- (5) Ensure that the owner and operator of each clean energy facility that delivers electric power to an electric power supplier is in substantial compliance with all federal and state laws, regulations, and rules for the protection of the environment and conservation of natural resources.

- (6) Consider whether it is in the public interest to adopt rules for electric public utilities for net metering of clean energy facilities with a generation capacity of one megawatt or less.
- (7) Develop procedures to track and account for renewable energy certificates, including ownership of renewable energy certificates that are derived from a customer owned clean energy facility as a result of any action by a customer of an electric power supplier that is independent of a program sponsored by the electric power supplier.
  - (j) Repealed by Session Laws 2021-23, s. 16, effective May 17, 2021.
  - (k) Tracking of Renewable Energy Certificates. – No later than July 1, 2010, the Commission shall develop, implement, and maintain an Internet Web site for the online tracking of renewable energy certificates in order to verify the compliance of electric power suppliers with the CEPS requirements of this section and to facilitate the establishment of a market for the purchase and sale of renewable energy certificates.
  - (l) [Registration of Facilities. – ] The owner, including an electric power supplier, of each clean energy facility or new clean energy facility, whether or not required to obtain a certificate of public convenience and necessity pursuant to G.S. 62-110.1, that intends for renewable energy certificates it earns to be eligible for use by an electric power supplier to comply with G.S. 62-133.8 shall register the facility with the Commission. Such an owner shall file a registration statement in the form prescribed by the Commission and remit to the Commission the fee required pursuant to G.S. 62-300(a)(16). (2007-397, s. 2(a); 2009-475, s. 14(a); 2011-55, ss. 1, 2, 3; 2011-291, s. 2.13; 2011-309, s. 2; 2011-394, s. 1; 2015-241, s. 14.30(u); 2017-57, s. 14.1(p); 2017-192, ss. 7, 8(b), 10(a), 5.1(a); 2021-23, s. 16; 2023-138, s. 1(a).)
